About This Guide
  Introduction ............................................................................................................................................... xiii
  Documentation Set ................................................................................................................................. xiii
  Configurations ....................................................................................................................................... xiv
  Keypads ................................................................................................................................................ xiv
  Software Versions ................................................................................................................................. xiv
  Chapter Descriptions ......................................................................................................................... xvii
  Notational Conventions ....................................................................................................................... xvii
  Related Documents ............................................................................................................................. xviii
  Service Information ............................................................................................................................. xviii

Chapter 1: Getting Started
  Introduction .............................................................................................................................................. 1-1
  Unpacking ............................................................................................................................................... 1-1
  Part of the MC9500-K ......................................................................................................................... 1-2
  Getting Started .................................................................................................................................... 1-3
    Installing a microSD Card .................................................................................................................. 1-3
    Installing the SIM Card .................................................................................................................... 1-4
    Installing the Battery ........................................................................................................................ 1-6
    Charging the Battery ....................................................................................................................... 1-6
    Charging Temperature ...................................................................................................................... 1-7
    Powering On the MC9500-K .......................................................................................................... 1-8
    Calibrating the Screen .................................................................................................................... 1-8
    Replacing the Battery ..................................................................................................................... 1-8
    Removing the microSD Card ......................................................................................................... 1-9
    Removing the SIM Card .................................................................................................................. 1-9

Chapter 2: Battery Management
  Introduction .............................................................................................................................................. 2-1
Chapter 3: Using the MC9500-K

Introduction .................................................................................................................. 3-1
LED Indicators .............................................................................................................. 3-1
Resetting the MC9500-K ............................................................................................. 3-3
   Performing a Warm Boot ......................................................................................... 3-3
   Performing a Cold Boot ......................................................................................... 3-3
Waking the MC9500-K ................................................................................................. 3-3
Locking the MC9500-K ............................................................................................... 3-4
   Keypad Locking ....................................................................................................... 3-4
   Password Locking ..................................................................................................... 3-5
Keypads ....................................................................................................................... 3-6
Function Buttons ......................................................................................................... 3-7
Stylus .......................................................................................................................... 3-7
Entering Data ................................................................................................................ 3-8
Interactive Sensor Technology .................................................................................... 3-9
   Power Management ................................................................................................. 3-9
   Display Orientation ................................................................................................. 3-9
   Free Fall Detection ................................................................................................. 3-10
Today Screen .............................................................................................................. 3-11
Status Icons ............................................................................................................... 3-11
Programs ..................................................................................................................... 3-14
Settings ....................................................................................................................... 3-17
Adjusting Volume ....................................................................................................... 3-20
Battery Status Indications ......................................................................................... 3-20
   Battery Reserve Options ....................................................................................... 3-21
   Main Battery Temperature Notifications ............................................................ 3-22
Using Voice-Over-IP ................................................................................................. 3-23
Infrared Connection ................................................................................................. 3-24
   Exchanging Files using IR Connection ................................................................... 3-24
Printing ....................................................................................................................... 3-25

Chapter 4: Data Capture

Introduction .................................................................................................................. 4-1
Chapter 5: Using the Phone

Introduction ................................................................................................................. 5-1
Accessing the Phone Keypad ....................................................................................... 5-1
Turning the Phone On and Off ..................................................................................... 5-2
Audio Modes .................................................................................................................. 5-3
  Using a Wired Headset ............................................................................................... 5-3
  Using a Bluetooth Headset ....................................................................................... 5-4
  Adjusting Audio Volume ............................................................................................. 5-5
Hearing Aid Compatibility Setting ................................................................................. 5-5
Making a Call .................................................................................................................. 5-6
  Using the Phone ........................................................................................................... 5-6
  Using Contacts ............................................................................................................ 5-6
  Creating an Outlook Contact ...................................................................................... 5-7
  Editing an Outlook Contact ....................................................................................... 5-7
  Deleting a Contact ..................................................................................................... 5-8
  Creating a SIM Contact .............................................................................................. 5-8
Using Call History ......................................................................................................... 5-8
  Making a Speed Dial Call ......................................................................................... 5-9
Making an Emergency Call ............................................................................................ 5-9
Answering a Call ............................................................................................................ 5-10
  Incoming Call Features ............................................................................................ 5-10
Smart Dialing ................................................................................................................ 5-11
Muting a Call .................................................................................................................. 5-12
Taking Notes ................................................................................................................... 5-12
Using Speed Dial ............................................................................................................ 5-13
  Adding a Speed Dial Entry ....................................................................................... 5-13
  Editing a Speed Dial Entry ....................................................................................... 5-15
  Deleting a Speed Dial Entry .................................................................................... 5-16
Using Call History ......................................................................................................... 5-16
  Managing Call History .............................................................................................. 5-16
    Changing the Call History View .............................................................................. 5-17
    Resetting the Recent Calls Counter ....................................................................... 5-17
    Deleting Call History Items by Call Date ............................................................... 5-18
    Deleting All Call History Items ............................................................................. 5-18
    Viewing Call Status ................................................................................................. 5-18
Chapter 6: Using GPS Navigation

Introduction .......................................................... 6-1
Software Installation .................................................. 6-1
MC9500-K GPS Setup ................................................. 6-1
Operation ........................................................................ 6-2
  GPS Maps on microSD Cards ........................................ 6-2
  Answering a Phone Call While Using GPS .................... 6-2
  Losing the GPS Signal While in a Vehicle ..................... 6-2
  Assisted GPS .......................................................... 6-2

Chapter 7: Using Bluetooth

Introduction .......................................................... 7-1
Adaptive Frequency Hopping ......................................... 7-1
Security ......................................................................... 7-2
Bluetooth Configuration .............................................. 7-3
Bluetooth Power States ................................................ 7-4
  Cold Boot ............................................................... 7-4
  Warm Boot ............................................................. 7-4
  Suspend .................................................................... 7-4
  Resume ..................................................................... 7-5
Using Microsoft Bluetooth Stack ................................. 7-5
  Turning the Bluetooth Radio Mode On and Off .......... 7-5
  Enabling Bluetooth .................................................. 7-5
  Disabling Bluetooth .................................................. 7-5
Discovering Bluetooth Device(s) ............................... 7-6
Available Services ..................................................... 7-8
  Object Push Services via Beam ................................. 7-9
  Internet Sharing ...................................................... 7-10
  Hands-free Services ................................................ 7-11
  Serial Port Services .................................................. 7-12
  ActiveSync Using Serial Port Services ...................... 7-13
  Phone Book Access Profile Services ......................... 7-14
  Dial-Up Networking Services ................................. 7-15
  Connect to a HID Device ........................................ 7-15
  A2DP/AVRCP Services ............................................. 7-15

Using the Call History Menu ........................................ 5-19
Swapping Calls on an MC9596 ...................................... 5-20
Swapping Calls on an MC9598 ...................................... 5-20
Conference Calling on an MC9596 ......................... 5-21
Three-way Calling on an MC9598 ............................... 5-23
Text Messaging .......................................................... 5-24
  Viewing Text Messages ............................................ 5-24
  Sending a Text Message .......................................... 5-26
Establishing a MC9596 Data Connection ................... 5-28
  Ending a Data Connection ........................................ 5-29
Establishing an MC9598 Data Connection .................. 5-30
  Ending a Data Connection ........................................ 5-30

Chapter 7: Using Bluetooth

Turning the Bluetooth Radio Mode On and Off ............. 7-5
  Enabling Bluetooth .................................................. 7-5
  Disabling Bluetooth .................................................. 7-5
Discovering Bluetooth Device(s) ............................... 7-6
Available Services ..................................................... 7-8
  Object Push Services via Beam ................................. 7-9
  Internet Sharing ...................................................... 7-10
  Hands-free Services ................................................ 7-11
  Serial Port Services .................................................. 7-12
  ActiveSync Using Serial Port Services ...................... 7-13
  Phone Book Access Profile Services ......................... 7-14
  Dial-Up Networking Services ................................. 7-15
  Connect to a HID Device ........................................ 7-15
  A2DP/AVRCP Services ............................................. 7-15
Chapter 8: Accessories

Introduction ........................................................................................................ 8-1
Universal Accessory System .................................................................................. 8-3
Single Bay USB Cradle ............................................................................................ 8-4
  Communication and Charging the MC9500-K Battery ........................................... 8-4
Single Slot Battery Charger ..................................................................................... 8-6
  Charging the Battery .............................................................................................. 8-6
Four Bay Charge Only Cradle .................................................................................. 8-7
  Charging ................................................................................................................ 8-7
Four Bay Ethernet Cradle ........................................................................................ 8-9
  Communication and Charging .............................................................................. 8-9
  LED Indicators ........................................................................................................ 8-10
    Speed LED .......................................................................................................... 8-10
    Link LED ............................................................................................................ 8-10
Four Slot Battery Charger ....................................................................................... 8-11
  Battery Charging ................................................................................................. 8-11

Turning the Bluetooth Radio Mode On and Off ...................................................... 7-17
Disabling Bluetooth ............................................................................................ 7-17
Enabling Bluetooth ............................................................................................. 7-17
Modes ................................................................................................................... 7-17

## Glossary

## Index
Introduction

This guide provides information about using the MC9500-K mobile computers and accessories.

☑ NOTE   Screens and windows pictured in this guide are samples and can differ from actual screens.

Documentation Set

The documentation set for the MC9500-K provides information for specific user needs, and includes:

- **MC9500-K Quick Start Guide** - describes how to get the MC9500-K mobile computer up and running.
- **MC9500-K Mobile Computer Integrator Guide** - describes how to set up the MC9500-K mobile computer and accessories.
- **Microsoft® Applications for Windows Mobile® 6 User Guide** - describes how to use Microsoft developed applications.
- **Enterprise Mobility Application Guide** - describes how to use Enterprise Mobility developed sample applications.
- **Enterprise Mobility Developer Kit (EMDK) Help File** - provides API information for writing applications.
Configurations

This guide covers the following configurations:

<table>
<thead>
<tr>
<th>Configuration</th>
<th>Radios</th>
<th>Display</th>
<th>Memory</th>
<th>Data Capture Options</th>
<th>Operating System</th>
<th>Keypads</th>
</tr>
</thead>
<tbody>

</tbody>
</table>

Keypads

The following keypads are available:

- Alpha Primary
- Telephony Numeric
- Calculator Numeric
- Alpha Numeric.

See Appendix C, Keypads for specific keypad information.

Software Versions

This guide covers various software configurations and references are made to operating system or software versions for:

- Adaptation Kit Update (AKU) version
- OEM version
- BTEExplorer version
- Fusion version
- Phone version.
AKU Version

To determine the Adaptation Kit Update (AKU) version:

Tap Start > Settings > System tab > About icon > Version tab.

The second line lists the operating system version and the build number. The last part of the build number represents the AKU number. For example, Build 20963.1.5.2 indicates that the device is running AKU version 1.5.2.

OEM Version

To determine the OEM software version:

Tap Start > Settings > System tab > System Info icon > System tab.

BTExplorer Software

NOTE BTExplorer application is only available when the StoneStreet One Bluetooth stack is enabled. Refer to the MC9500-K Mobile Computer Integrator Guide for information on selecting the Bluetooth stack.

To determine the BTExplorer software version:

Tap BTExplorer icon > Show BTExplorer > File > About.
Fusion Software

To determine the Fusion software version:

Tap Fusion Signal Strength icon > Wireless Status > Versions.

Phone Software

To determine the Phone software version:

On MC9596-K, tap Start > Phone > Menu > Options > PhonenInfo tab. On MC9598-K tap Start > Phone > Menu > Options > Version Information tab.
Chapter Descriptions

Topics covered in this guide are as follows:

- **Chapter 1, Getting Started** provides information on getting the MC9500-K up and running for the first time.
- **Chapter 2, Battery Management** provides information on the types of batteries and how to charge them.
- **Chapter 3, Using the MC9500-K** provides information on using the MC9500-K.
- **Chapter 4, Data Capture** provides instructions for using the MC9500-K to capture data using the laser scanner, imager and camera.
- **Chapter 5, Using the Phone** provides basic instructions for using the MC9500-K phone.
- **Chapter 6, Using GPS Navigation** provides information about GPS navigation with the MC9500-K.
- **Chapter 7, Using Bluetooth** explains Bluetooth functionality on the MC9500-K.
- **Chapter 8, Accessories** describes the available accessories and how to use them with the MC9500-K.
- **Chapter 9, Maintenance & Troubleshooting** includes instructions on cleaning and storing the MC9500-K, and provides troubleshooting solutions for potential problems during MC9500-K operation.
- **Appendix A, Technical Specifications** provides the technical specifications for the MC9500-K.
- **Appendix B, Voice Quality Manager** provides information on Voice Quality Manager software.
- **Appendix C, Keypads** provides keypad layouts and operation.

Notational Conventions

The following conventions are used in this document:

- “Mobile computer” refers to the Motorola MC9500-K hand-held computer.
- *Italics* are used to highlight the following:
  - Chapters and sections in this and related documents
  - Icons on a screen.
- **Bold** text is used to highlight the following:
  - Dialog box, window, and screen names
  - Drop-down list and list box names
  - Check box and radio button names
  - Key names on a keypad
  - Button names on a screen.
- Bullets (•) indicate:
  - Action items
  - Lists of alternatives
  - Lists of required steps that are not necessarily sequential
- Sequential lists (e.g., those that describe step-by-step procedures) appear as numbered lists.

Service Information

If you have a problem with your equipment, contact Motorola Enterprise Mobility support for your region. Contact information is available at: http://www.motorola.com/enterprisemobility/contactsupport.

When contacting Enterprise Mobility support, please have the following information available:

- Serial number of the unit (found on manufacturing label)
- Model number or product name (found on manufacturing label)
- Software type and version number.

Motorola responds to calls by email, telephone or fax within the time limits set forth in support agreements.

If your problem cannot be solved by Motorola Enterprise Mobility Support, you may need to return your equipment for servicing and will be given specific directions. Motorola is not responsible for any damages incurred during shipment if the approved shipping container is not used. Shipping the units improperly can possibly void the warranty.

If you purchased your Enterprise Mobility business product from a Motorola business partner, contact that business partner for support.
Chapter 1 Getting Started

Introduction

This chapter explains how to set up the MC9500-K for the first time.

Unpacking

Carefully remove all protective material from the MC9500-K and save the shipping container for later storage and shipping.

Verify that you received the following:

- MC9500-K mobile computer
- 4800 mAh Lithium-ion battery
- Regulatory Guide
- Quick Start Guide.

Inspect the equipment for damage. If any equipment is missing or damaged, contact the Motorola Enterprise Mobility Support center immediately. See page xviii for contact information.

Prior to using the MC9500-K for the first time, remove the protective shipping film that covers the keypad and battery display.
Part of the MC9500-K

Figure 1-1  MC9500-K
Getting Started

To start using the MC9500-K for the first time:

- Install a microSD card (optional)
- Install the SIM card (MC9596 only)
- Install the battery.
- Charge the MC9500-K.

Installing a microSD Card

The microSD card slot provides secondary non-volatile storage. The slot is located under the battery pack. Refer to the documentation provided with the card for more information, and follow the manufacturer’s recommendations for use.

**CAUTION** Follow proper ESD precautions to avoid damaging the microSD card. Proper ESD precautions include, but are not limited to, working on an ESD mat and ensuring that the operator is properly grounded.

To install the microSD card:

1. Remove the SD card cover using flathead screwdriver.

![Figure 1-2 SD Card Cover Removal](image)

2. Slide the microSD card holder door to the left to open.

3. Lift microSD card holder door.

![Figure 1-3 Lift microSD Card Holder Door](image)

4. Insert the microSD card into card holder door ensuring that the card slides into the holding tabs on each side of the door.
5. Close the card holder door and slide to the right to lock into place.
6. Align the SD card cover over the access hole and press down until it snaps into place.

Installing the SIM Card

NOTE MC9596 configuration only.

GSM phone service requires a Subscriber Identification Module (SIM) card, or smart card. Obtain the card from your service provider. The card fits into the MC9596 and can contain the following information:

- Mobile phone service provider account details.
- Information regarding service access and preferences.
- Contact information, which can be moved to Contacts on the MC9596.
- Any additional services to which you have subscribed.

NOTE For more information about SIM cards, refer to the service provider’s documentation.

To install the SIM card:
1. Remove SIM card cover using flathead screwdriver.
2. Slide the SIM card holder door to the left to unlock.
3. Lift the SIM card holder door.

![Figure 1-6 Lifting the SIM Cover](image)

4. Insert the SIM card, as shown in Figure 1-7 into the holder door with the contacts facing down and the card notch facing up.

![Card Notch](image)

![Figure 1-7 Inserting the SIM Card](image)

5. Close SIM card holder door and slide to the right to lock into place.

6. Align the SIM card cover over the access hole and press down until it snaps into place.

7. Install the battery.

8. After completing initial MC9596 setup or after replacing a SIM card:
   a. Press the red Power button.
   b. On the Today screen, tap Wireless Manager.
   c. Ensure Phone is on.
   d. Press the red Power button to suspend the MC9596.
   e. Perform a warm boot. See Resetting the MC9500-K on page 3-3.
   f. Make a call to verify cellular connection.

**NOTE** For detailed information about WWAN activation and settings, refer to the MC9500-K Series Mobile Computer Integrator Guide.
Installing the Battery

To install the battery:

1. Insert the battery, top first, into the battery compartment.

2. Press the battery down into the battery compartment until the battery release latches snap into place.

3. The MC9500-K powers up automatically after inserting the battery, if the battery has been charged previously.

Charging the Battery

⚠️ **CAUTION** Ensure that you follow the guidelines for battery safety described in Battery Safety Guidelines on page 9-2.

Before using the MC9500-K for the first time, charge the battery using either a charging cable or a cradle:

✅ **NOTE** For cable and cradle setup and charging procedures refer to the MC9500-K Series Mobile Computer Integrator Guide.

- USB Charging Cable
- Charge Only Cable
- Single Bay USB Cradle
- Four Bay Charge Only Cradle
- Four Bay Ethernet Cradle.

Align and hook the MC9500-K interface pocket onto the cradle’s or cable’s cleat. The battery automatically begins charging. See Table 1-1 for charging indications. The 4800 mAh battery fully charges in less than six hours.
The MC9500-K is equipped with a memory backup battery which automatically charges from the fully-charged main battery. When using the MC9500-K for the first time, the backup battery requires approximately 36 hours to fully charge. This is also true any time the backup battery is discharged, which occurs when the main battery is removed for several hours. The backup battery retains RAM data in memory for at least 15 minutes (at room temperature) when the MC9500-K’s main battery is removed. When the MC9500-K reaches a very low battery state, the combination of main battery and backup battery retains RAM data in memory for at least 48 hours.

### Charging Temperature

Charge batteries in temperatures from 0°C to 40°C (32°F to 104°F). Note that charging is intelligently controlled by the MC9500-K.

To accomplish this, for small periods of time, the MC9500-K alternately enables and disables battery charging to keep the battery at acceptable temperatures. The MC9500-K indicates when charging is disabled due to abnormal temperatures via its LED. See *Table 1-1*.

---

**Table 1-1  LED Charge Indicators**

<table>
<thead>
<tr>
<th>Battery Status LED</th>
<th>Indication</th>
</tr>
</thead>
</table>
| Off               | Indicates that the:  
  - battery is not charging  
  - MC9500-K is not connected correctly to the cradle or not connected to a power source.  
  - cradle is not powered. |
| Slow Blinking Amber (1 blink every 2 seconds) | Indicates that a healthy battery is charging. |
| Slow Blinking Red (1 blink every 2 seconds) | Indicates that an unhealthy battery is charging. |
| Solid Green       | Indicates that a healthy battery is fully charged. |
| Solid Red         | Indicates that an unhealthy battery is fully charged. |
| Fast Blinking Amber (2 blinks/second) | Indicates a charging error, e.g.:  
  - temperature is too low or too high.  
  - charging has gone on too long without completion (typically eight hours). |
| Single Blink Amber (when Power button pressed) | Battery depleted. |
Powering On the MC9500-K

After the MC9500-K is connected to power the splash screen displays for about a minute as the MC9500-K initializes its flash file system, then the calibration window appears.

Calibrating the Screen

NOTE The Calibration screen can be accessed by pressing CTRL key - BKSP key or tapping Start > Settings > Screen > Align Screen button.

To calibrate the screen so the cursor on the touch screen aligns with the tip of the stylus:
1. Remove the stylus from its holder on the side of the MC9500-K.
2. Carefully press and briefly hold the tip of stylus on the center of each target that appears on the screen.
3. Repeat as the target moves around the screen, then tap the screen to continue.

Replacing the Battery

To replace the battery:

CAUTION Suspend the MC9500-K prior to removing the battery. Failure to properly remove the battery may cause the MC9500-K to cold boot and potential loss of data.

1. If the MC9500-K is in suspend mode, press the red Power button to wake the device.
2. Press the red Power button to suspend the MC9500-K.
3. Wait for red Decode LED to turn on and then turn off.
4. Unhook the handstrap.
5. Press the two battery release latches to release the battery. The battery ejects slightly.

6. Lift the battery from the MC9500-K.
7. Insert the replacement battery, top first, into the battery compartment in the back of the MC9500-K.
8. Press the battery down until the battery release latches snap into place.

The MC9500-K powers up after inserting the battery.
Removing the microSD Card

To remove an microSD card:

1. If the MC9500-K is in suspend mode, press the red Power button to wake the device.
2. Press the red Power button to suspend the MC9500-K.
3. Wait for red Decode LED to turn on and then turn off.
4. Unhook the handstrap.
5. Remove the battery.
6. Remove the SD card cover using a flathead screwdriver.
7. Slide the SD card holder door to the left to unlock.
8. Lift the microSD card holder door.
9. Remove microSD card from holder.
10. Close the microSD card holder door.
11. Slide the microSD card holder door to the right to lock into place.
12. Align the SD card cover over the access hole and press down until it snaps into place.
13. Replace the battery.

Removing the SIM Card

To remove an SIM card:

1. If the MC9500-K is in suspend mode, press the red Power button to wake the device.
2. Press the red Power button to suspend the MC9500-K.
3. Wait for red Decode LED to turn on and then turn off.
4. Unhook the handstrap.
5. Remove the battery.
6. Remove the SIM card cover using a flathead screwdriver.
7. Slide the SIM card holder door to the left to unlock.
8. Lift the SIM card holder door.
9. Remove SIM card from holder.
10. Close the SIM card holder door.

11. Slide the SIM card holder door to the right to lock into place.

12. Align the SIM card cover over the access hole and press down until it snaps into place.

13. Replace the battery.
Introduction

This chapter provides information on battery functionality, battery status indications, charging the MC9500-K, charging spare batteries and power saving techniques.

Battery Functionality

The 4800 mAh battery provides power to the MC9500-K and contains charging and status indications on the front of the battery. The indicators function differently depending upon the battery mode and allow the user to determine the health of the battery.

Charging Status LED indicates the charging status and health of the battery. The Charge Level Indicator indicates an unhealthy battery and the charge level of the battery.
Battery Health

A battery becomes unhealthy when the **Battery Usage Indication** reach a predefined threshold (end of usable life).

![Battery Warning Dialog Box](image1)

**NOTE** The point at which a battery becomes unhealthy may vary depending upon the environment and charging conditions.

The **Battery Usage Threshold** value can be changed. See the *MC9500-K Mobile Computer Integrator Guide* for more information.

When the battery becomes unhealthy, a dialog box displays on the MC9500-K. When this appears, tap **Dismiss**. Replace the battery as soon as possible. The battery Charge Level indicator display an “X” when the battery becomes unhealthy (see **Figure 2-3**). When charging an unhealthy battery in the MC9500-K, the Battery Status LED blinks red.

![Unhealthy Battery Indication](image2)
Battery Status

The MC9500-K battery provides status information on the front of the battery that allows the user to make determination on what battery to use. The battery status indications vary depending upon the mode of the battery:

- Installed in an MC9500-K
- In a charger
- Stand-alone.

Installed in an MC9500-K

*NOTE* The Charge Level indicator does not display the charge level while the MC9500-K is charging.

When the 4800 mAh battery is installed in the MC9500-K, the user can view the charge level (with Status button press) and health of the battery (see *Figure 2-4*). The Battery Status LED is disabled when the battery is installed in the MC9500-K. If the battery is unhealthy, the Charge Level indicator displays an “X” (see *Figure 2-3*).

![Battery in MC9500-K](image)

*Figure 2-4  Battery in MC9500-K*

Press the Status button to display the current battery charge level. It will display for five seconds and then turn off. *Table 2-1* list the Charge Level indications when the Status button is pressed.
### Table 2-1  Charge Level Indicator

</tr>
<tr>
<td>Battery Serial #</td>
<td>Displays the serial number of the battery.</td>
</tr>
</tbody>
</table>

For information on changing the Battery Usage Threshold, refer to the MC9500-K Mobile Computer Integrator Guide.

In a Charger

When the battery is in a Single Slot Battery Charger, Four Slot Battery Charger or Vehicle Battery Charger, the battery charging status and health is indicated on the front of the battery. If the charger is not powered, the battery acts as if it is in stand-alone mode. See Stand-alone on page 2-8 for more information.
The Battery Status LED displays the current state of charging as described in Table 2-4. The Charge Level indicator displays the charge level of a healthy battery as described in Table 2-1.

With an unhealthy battery, an "X" appears on the display. To view the charge level, press the Status button. The display indicates the level of charge. After five seconds the display reverts to the “X” indication.
### Table 2-4  Battery Status in Charger

</tbody>
</table>

- **Charging Error**
  - temperature is too low or too high.
  - charging has gone on too long without completion (typically eight hours).
Stand-alone

When the battery is not installed in an MC9500-K or a charger, the charge status and health of the battery displays on the battery front panel. If the battery is unhealthy, an “X” appears in the Charge Level indicator. Press the Status button to view the health and charge level of the battery. The Battery Status LED lights and the Charge Level indicator display the charge level. After five seconds the LED turns off and the Charge Level indicator reverts to the previous display. See Table 2-5 for Battery Status LED and Charge Level indicator descriptions.

See Table 2-1 on page 2-4 for detail information.
Charging the MC9500-K

**CAUTION** Ensure that you follow the guidelines for battery safety described in *Battery Safety Guidelines on page 9-2.*

The MC9500-K is equipped with a memory backup battery which automatically charges from the fully-charged main battery. When using the MC9500-K for the first time, the backup battery requires approximately 36 hours to fully charge. This is also true any time the backup battery is discharged, which occurs when the main battery is removed for several hours. The backup battery retains RAM data in memory for at least 15 minutes (at room temperature) when the MC9500-K's main battery is removed. When the MC9500-K reaches a very low battery state, the combination of main battery and backup battery retains RAM data in memory for at least 36 hours.

To charge the battery, use either a cradle or charging cable. For cable and cradle setup and charging procedures refer to the *MC9500-K Mobile Computer Integrator Guide*.

To charge the battery:

1. Connect the charging accessory to the appropriate power source. See *MC9500-K Series Mobile Computer Integrator Guide* for setup information.

2. Align and hook the MC9500-K interface pocket onto the cradle’s or cable’s cleat. The MC9500-K begins charging. The Charging/Battery Status LED blinks while charging, then turns solid when fully charged (LED color depends upon health of the battery). See *Table 2-6* for charging indications. The 4800 mAh battery fully charges in less than six hours.

Table 2-6  Charging/Battery Status LED Indications (Continued)
Charging a Spare Battery

Charge a spare battery using one of the following accessories:

- Single Slot Battery Charger
- Four Slot Battery Charger
- Vehicle Battery Charger.

To charge a spare battery:

1. Ensure the charger is connected to an appropriate power source.
2. Insert the spare battery into the charger. The spare battery begins charging.

![Battery Status LED and Charge Level Indicator](image)

**Figure 2-7  Spare Battery in Single Slot Battery Charger**

The battery charging and health status is indicated on the front of the battery. *Table 2-7* lists the charging indications.
### Charging Temperature

Charge batteries in temperatures from 0°C to 40°C (32°F to 104°F). Note that charging is intelligently controlled by the MC9500-K.

To accomplish this, for small periods of time, the MC9500-K alternately enables and disables battery charging to keep the battery at acceptable temperatures. The MC9500-K indicates when charging is disabled due to abnormal temperatures via its LED.

Power Saving Techniques

Observe the following battery saving tips:

- Leave the MC9500-K connected to AC power at all times when not in use.
- Set the MC9500-K to turn off after a short period of non-use.
- Set the backlight to turn off after a short period of non-use.
- Turn off all wireless activities when not in use.

Changing the Power Settings

To set the MC9500-K to turn off after a short period of non-use:

1. Tap Start > Settings > System tab > Power icon > Advanced tab.
2. Select the On battery power: Turn off device if not used for check box and select a value from the drop-down list.
3. Select ok.

Changing the Backlight Settings

To change the backlight settings in order to conserve more battery power:

1. Tap Start > Settings > System tab > Backlight icon > Battery Power tab.
2. Select the Disable backlight if device is not used for check box and select a value from the drop-down list.
3. Select the Brightness tab.
4. Tap the Enable backlight check box to turn off the display backlight, or use the slider to set a low value for the backlight.
5. Select ok.

Changing the Keypad Backlight Settings

To change the keypad backlight settings in order to conserve more battery power:

1. Tap Start > Settings > System tab > Keylight icon > Battery Power tab.
2. Select the On battery power: Disable keylight if device if not used for check box and select a value from the drop-down list.
3. Select the Advanced tab.
4. Tap the Disable keylight check box to turn off the keypad backlight.
5. Select ok.

Turning Off the Radios

Windows Mobile 6 devices include Wireless Manager, which provides a simple method of enabling, disabling, and configuring all the device’s wireless capabilities in one place.
To open **Wireless Manager**, tap the **Connectivity** icon or tap **Wireless Manager** on the **Today** screen.

![Connectivity icon](image)

**Figure 2-8 Opening Wireless Manager**

Select **Wireless Manager**.

![Wireless Manager Window](image)

**Figure 2-9 Wireless Manager Window**

†  **NOTE** Wireless connection options vary depending upon configurations.

To enable or disable a wireless connection, tap the specific button.

To enable or disable all wireless connections, tap and hold the **All** button.

To configure settings for a connection, tap **Menu**.
Figure 2-10  Wireless Manager Menu
Chapter 3 Using the MC9500-K

Introduction

This chapter explains the indicators, buttons, status icons, and controls on the MC9500-K, and provides basic instructions for using the device.

LED Indicators

The MC9500-K has three LED indicators. The Decode LED indicates scanning status. The Battery Status LED indicates battery charging and health status. The WAN Radio Status LED indicates WAN radio status. Table 3-1 describes the LED indications.

![LED Indicators](image)

**Table 3-1 LED Indications**

<table>

</tbody>
</table>

**NOTE** For information about scanning/decoding, see *Chapter 4, Data Capture*. For information about WAN radio status and settings, see *Chapter 5, Using the Phone*, or refer to the *MC9500-K Mobile Computer Integrator Guide*. 
**Resetting the MC9500-K**

There are two reset functions, warm boot and cold boot. A warm boot restarts the MC9500-K by closing all running programs. A cold boot also restarts the MC9500-K, and also initializes some drivers. Data saved in flash memory or a memory card is not lost.

If the MC9500-K is not functioning properly, perform a warm boot first. If the MC9500-K still does not respond, perform a cold boot.

**Performing a Warm Boot**

Hold down the red Power button for approximately five seconds. As soon as the MC9500-K starts to boot release the Power button.

**Performing a Cold Boot**

To perform a cold boot, simultaneously press the red Power button and the 1 and 9 keys.

---

**Waking the MC9500-K**

The wake-up conditions define what actions wake up the mobile computer after it has gone into suspend mode. The mobile computer can go into suspend mode by either pressing the Power button or automatically by Control Panel time-out settings. These settings are configurable and the factory default settings are shown in Table 3-2 are subject to change/update. Tap Start > Setting > System > Power icon > Wakeup tab to configure these settings.

**Table 3-2  Wake-up Default Settings**

Locking the MC9500-K

You can lock the MC9500-K by disabling key presses and screen tap or by requiring a password.

**Keypad Locking**

Locking the MC9500-K turns off keyboard and touch screen functionality. This is helpful when the MC9500-K is turned on and you want to prevent accidental key presses.

To lock the device, tap the **Device unlocked** icon. The icon changes to locked.

To unlock the device and free it for use, tap **Unlock**.
Tap **Unlock** on the **Unlock** window.

✓ **NOTE** You can make emergency calls even when the MC9596-K or MC9598-K is locked. See *Making an Emergency Call on page 5-9* for more information.

### Password Locking

Use the **Password** window to set a password to disable unauthorized access to the MC9500-K.

✓ **NOTE** If the device is configured to connect to a network, use a strong (difficult to figure out) password to help protect network security. Password cracking tools continue to improve and the computers used to crack passwords are more powerful than ever.

1. Tap **Start** > **Settings** > **Personal** tab > **Lock** icon > **Password** tab.

![Password Window - Password Tab](image)

**Figure 3-5**  *Password Window - Password Tab*

2. Select **Prompt if device unused for** check box to enable password protection.

3. From the drop-down list, select a time value for the protection to take affect after non-use.

4. From the **Password type:** drop-down list, select either **Simple PIN** or **Strong alphanumeric**.

5. For a simple password, enter a four-digit password in the **Password** field.
   
   For a stronger password:
   
   a. Enter a seven character password in the **Password** field. A strong password must contain at least seven characters and contain at least three of the following: uppercase and lowercase letters, numerals, and punctuation.
   
   b. Re-enter the password in the **Confirm** field.

6. Tap **ok**.

7. To set a hint to remember the password, tap the **Hint** tab.
8. In the text box, enter a hint for a password reminder.
9. Tap ok.

When the MC9500-K is not used for a period of time and the user tries to access the device, the Password window appears.

Figure 3-7  Enter Password Windows

Enter the password to un-lock the device.
Tap Unlock.

Keypads

The MC9500-K offers four types modular keypad configurations. See Appendix C, Keypads for keypad functionality.
Function Buttons

The MC9500-K’s buttons perform certain functions.

- **Power**: Press the red **Power** button to place the MC9500-K into suspend mode or wake from suspend mode. Also use the **Power** button to reset the MC9500-K by performing a warm or cold boot. See *Resetting the MC9500-K on page 3-3*.

- **Scan/Action**: Press to scan bar codes or capture images. See *Chapter 4, Data Capture*. Or, press to open an application or perform a function. See the Microsoft® Applications for Mobile 6 User Guide to set an application to open.

- **Volume Up/Down**: Press to increase or decrease the MC9500-K’s volume.

- **Action**: Press to open an application or perform a function. See the Microsoft® Applications for Windows Mobile 6 User Guide to set an application to open.

- **Green Key**: Press to open the Phone Dialer window or answer an incoming call or place a call on hold.

- **Red Key**: Press to end a call.

- **Function Keys**: Programmable functions for performing specific applications.
  - F1 - Left soft key
  - F2 - Right soft key
  - F3 - Talk (MC9596/8 only)
  - F4 - End Call (MC9596/8 only)
  - F5 - Refreshes the screen in Internet Explorer and File Explorer.
  - F6 - Volume Up.

Stylus

Use the MC9500-K stylus to select items and enter information. The stylus functions as a mouse.

- **Tap**: Touch the screen once with the stylus to press option buttons and open menu items.

- **Tap and Hold**: Tap and hold the stylus on an item to see a list of actions available for that item. On the pop-up menu that appears, tap the action to perform.

- **Drag**: Hold the stylus on the screen and drag across the screen to select text and images. Drag in a list to select multiple items.

⚠️ **CAUTION** To prevent damage to the screen, do not use any device other than the Motorola-provided stylus.
Entering Data

When entering data on the keypad, use either the single-hand method or the two-hand method as shown in Figure 3-8.

Figure 3-8  Entering Data on the Keypad
Interactive Sensor Technology

This section describes the functionality of the Interactive Sensor Technology (IST) feature on the MC9500-K.

The IST supports the following features.

- **Power Management** – manage power by configuring IST to control switching on/off the backlight, control suspend mode of the MC9500-K by monitoring motion and orientation.
- **Display Orientation** – switch the screen orientation to either landscape or portrait depending on the MC9500-K orientation.
- **Free Fall Detection** – monitors free fall duration and records the time and type of the drop event.

**Power Management**

The MC9500-K orientation and motion sensitive data can be used as an indicator of MC9500-K usage and can be used to manage the battery power of the mobile computer. For example, IST can be configured to control the backlight on and off functionality or go into suspend according to a user gesture by placing screen facing down. It can also be used to keep the MC9500-K active while it is in movement to prevent it from quickly going into suspend mode while in use.

**Display Orientation**

The screen can be rotated between portrait and landscape modes automatically, depending on the physical orientation of the MC9500-K. For example, if the MC9500-K is rotated 90° counterclockwise, IST rotates the display counterclockwise 90° so that the screen display appears correct.

This functionality is achieved by monitoring screen angle and rotating the display to counter any changes. IST only rotates the screen in multiples of 90°.

![Figure 3-9 Display Orientation](image)
Free Fall Detection

IST continuously monitors gravitational force on the MC9500-K according to its current position. When the MC9500-K free falls, IST detects the absence of gravitational force and records the event data if it detects a free fall more than 450 ms, which may indicate nearly a one-meter drop. This data can be used as an indicator of potential abuse or misuse.

IST features a log for recording the free fall events. This log records the date, time and the time period of the free fall.

Figure 3-10  Free Fall Detection
**Today Screen**

The Today screen displays important information, such as upcoming appointments and status indicators. Tap a section on the screen to open the associated program. Alternatively, tap **Start > Today** to display the **Today** screen.

![Today Screen Diagram](image)

**Figure 3-11** Today Screen

To customize the **Today** screen, tap **Start > Settings > Today** icon. Use the **Appearance** tab to customize the background and the **Items** tab to change the list and order of items that appear on the screen.

### Status Icons

The Navigation bar at the top of the screen can contain the status icons listed in **Table 3-3**.

</tbody>
</table>
Adjusting Volume

To adjust the system volume using the **Speaker** icon in the navigation bar:

1. Tap the **Speaker** icon. The **Volume** dialog box appears.

![Volume Dialog Box](image)

2. Tap and move the slide bar to adjust the volume.

3. Select the **On** or **Off** radio button to turn the volume on or off.

You can also adjust the system volume using the **Sounds & Notifications** window, or use the **Up/Down** button on the side of the MC9500-K.

Battery Status Indications

Battery icons appear on the navigation bar indicating the battery power level. When the main battery power falls below a predetermined level the icon indicates the status and a battery dialog box appears indicating the status of the battery.

### Table 3-7  Settings in the Setting Window (Continued)

</tbody>
</table>
The **Battery** icon always appears in the **navigation bar** when the Today screen is visible. The icon indicates the battery power level. The message displays until the **Dismiss** button is pressed.

**Battery Reserve Options**

If the charge of the battery reaches a critical threshold, the MC9500-K shuts down. This threshold can be changed but affects the amount of time that data can be retained.

1. Tap **Start > Settings > System** tab > **Power** icon > **RunTime** tab. A warning message appears.
2. Read the warning message and tap ok.

3. Select one of the Battery Reserve Options.
   - **Option 1: Minimum** - After a low battery shutdown, data will be retained for minimum amount of time. Battery should be replaced immediately to avoid data loss.
   - **Option 2: Less** - After a low battery shutdown, data will be retained for less than normal amount of time.
   - **Option 3: Normal** - After a low battery shutdown, data will be retained for maximum amount of time.

4. Tap ok.

**Main Battery Temperature Notifications**

The temperature notification system implements three levels of notification when the temperature within the battery exceeds specific temperature thresholds:

- **Level 1: Temperature Watch**: this level is similar to main battery low warning. It indicates that the battery temperature has reached the first threshold level. The user should move to an environment within proper operating temperature.
- **Level 2: Temperature Warning**: this level is similar to main battery very low warning. It indicates the battery temperature has reached the second threshold level. The user should stop using the MC9500-K.
- **Level 3: Temperature Error:** this level indicates the battery has reached an unusable temperature threshold and immediately suspends the MC9500-K. This level does not have any graphical notification associated with it.

\[ Image of Main Battery Temperature Watch Dialog Box \]

\[ Image of Main Battery Temperature Warning Dialog Box \]

_USED NOTE_ The Temperature Warning dialog box remains visible until you tap Hide.

---

**Using Voice-Over-IP**

The MC9500-K supports Voice over IP over WLAN (VoWLAN) using Motorola or third party voice clients. The MC9500-K can communicate using VoIP either using the MC9500-K supports several audio outputs, including back speaker phone, front receiver or handset, and Bluetooth headset.

It is recommended that the wireless network use the 802.11a (5 GHz) band for voice applications. Using the 5 GHz band avoids some noise sources that may occur on the 802.11b/g (2.4 GHz) band due to wireless interference.

When using a Bluetooth headset with the MC9500-K and VoWLAN, it is required to use the Bluetooth Headset profile instead of Hands-free profile. Use the buttons on the MC9500-K to answer and end calls. See Chapter 7, Using Bluetooth for information on setting up a Bluetooth Headset Profile.
**Infrared Connection**

Using infrared, you can enable short-range file exchange between your MC9500-K and another IrDA device.

**Exchanging Files using IR Connection**

Ensure that the IrDA function on both the MC9500-K and the other device are enabled.

To send files via IrDA connection:

1. Switch to the program where you created the item you want to send and locate the item in the list.

   **NOTE** Do not cover or block the IrDA window.

2. Align the IrDA port of the MC9500-K with that of the IrDA device so that they are unobstructed and within a close range.

3. Tap and hold the item, then tap Beam [type of item] on the pop-up menu.

4. Tap the device that you want to send the file to.
To receive files via IrDA connection:

1. Align the IrDA port of the MC9500-K with that of the other IrDA device so that they are unobstructed and within a close range.

2. On the other device, send the file to the MC9500-K.

3. When the Receiving Data dialog displays, tap Yes.

Printing

The MC9500-K supports printing to specific devices. The Motorola Print Manager, available from the Support Central web site, provides support for printing to Bluetooth enabled printers.
Chapter 4 Data Capture

Introduction

The MC9500-K offers three types of data capture options:

- Laser scanning
- Imaging
- Color digital camera.

**NOTE** To read a bar code, a scanning enabled application must be installed on the MC9500-K. A sample scanning application can be downloaded from the Motorola Support Central site at [http://www.motorola.com/enterprisemobility/support](http://www.motorola.com/enterprisemobility/support).

---

Laser Scanning

An MC9500-K with an integrated linear laser scanner has the following features:

- Reading of a variety of bar code symbologies, including the most popular 1-D code types.
- Intuitive aiming for easy point-and-shoot operation.

Scanning Considerations

Typically, scanning is a simple matter of aim, scan, and decode and a few quick trial efforts master it. However, consider the following to optimize scanning performance:

- Range
  
  Any scanning device decodes well over a particular working range — minimum and maximum distances from the bar code. This range varies according to bar code density and scanning device optics.
  
  Scanning within range brings quick and dependable decodes; scanning too close or too far away prevents decodes. Move the scanner closer or further away to find the right working range for the bar codes being scanned.
• **Angle**  
  Scanning angle is important for promoting quick decodes. The MC9500-K scans at a 15° angle which improves scanning ergonomics.

• **Hold the MC9500-K farther away for larger symbols.**

• **Move the MC9500-K closer for symbols with bars that are close together.**

> **NOTE** Scanning procedures depend on the application and MC9500-K configuration. An application may use different scanning procedures from the one listed above.

### Laser Scanning

1. Ensure that a scan enabled application is loaded on the MC9500-K.

   ![15° Angle](Image)

   **Figure 4-1  Linear Scanning**

2. Press and hold the scan button. The laser beam exits from the end of the MC9500-K. Ensure the red scan beam covers the entire bar code. The Decode LED lights red to indicate that scanning is in process, then lights green and a beep sounds, by default, to indicate the bar code was decoded successfully.

   ![Correct vs Incorrect](Image)

   **Figure 4-2  Linear Scanner Aiming Pattern**

3. Release the scan button.
Decode Zones

The decode zones for the laser scanners are shown in Figure 4-3 and Figure 4-4. The figures shown are typical values. Table 4-2 lists the typical distances for selected bar code densities. The minimum element width (or “symbol density”) is the width in mils of the narrowest element (bar or space) in the symbol.

Note: Typical performance at 73°F (23°C) on high quality symbols in normal room light.

* Minimum distance determined by symbol length and scan angle.

Figure 4-3 MC9500-K Laser Scanner 35° Decode Zone
Note: Typical performance at 73°F (23°C) on high quality symbols in normal room light.

* Minimum distance determined by symbol length and scan angle.

Figure 4-4  MC9500-K Laser Scanner 47° Decode Zone
Imaging

MC9500-K with an integrated imager have the following features:

- Omnidirectional (360°) reading of a variety of bar code symbologies, including the most popular linear, postal, PDF417, and 2D matrix code types.
- The ability to capture and download images to a host for a variety of imaging applications.
- Advanced intuitive laser aiming for easy point-and-shoot operation.

The imager uses digital camera technology to take a digital picture of a bar code, stores the resulting image in its memory, and executes state-of-the-art software decoding algorithms to extract the data from the image.
Operational Modes

MC9500-K with an integrated imager support three modes of operation, listed below. Activate each mode pressing the Scan button.

- **Decode Mode**: In this mode, the MC9500-K attempts to locate and decode enabled bar codes within its field of view. The imager remains in this mode as long as you hold the scan button, or until it decodes a bar code.

  *NOTE* To enable Pick List Mode, download the Control Panel applet from the Support Central web site at [http://www.motorola.com/enterprisemobility/support](http://www.motorola.com/enterprisemobility/support). Pick List can also be set in an application using a API command.

- **Pick List Mode**: This mode allows you to selectively decode a bar code when more than one bar code is in the MC9500-K’s field of view. To accomplish this, move the aiming crosshair center dot over the required bar code to decode only that bar code. This feature is ideal for pick lists containing multiple bar codes and manufacturing or transport labels containing more than one bar code type (either 1D or 2D).

- **Image Capture Mode**: Use this mode to capture an image within the MC9500-K’s field of view. This is useful for capturing signatures or images of items like damaged boxes.

Imager Scanning

1. Ensure that a scan-enabled application is loaded on the MC9500-K.

![Image Capture Field of View](image)

2. Press and hold the scan button.

   The red laser aiming pattern turns on to assist in aiming. Ensure the cross-hair is on top of the bar code.

   The Decode LED lights red to indicate that scanning is in process, then lights green and a beep sounds, by default, to indicate the bar code was decoded successfully. Note that when the MC9500-K is in Pick List Mode, the imager does not decode the bar code until the crosshair center dot touches the bar code.
3. Release the scan button.

**NOTE** Imager decoding usually occurs instantaneously. The MC9500-K repeats the steps required to take a digital picture (image) of a poor or difficult bar code as long as the scan button remains pressed.
Imager Decode Ranges

The decode ranges provide the decode distances for bar codes of specified densities. Figure 4-8 shows the imager decode ranges and Table 4-2 on page 4-9 lists the scan ranges for the selected bar code densities. The minimum element width (or "symbol density") is the width in mils of the narrowest element (bar or space) in the symbol. The maximum usable length of a symbol at any given range is shown below.

Note: Typical performance at 73°F (23°C) on high quality symbols in normal room light.

* Minimum distance determined by symbol length and scan angle.

Figure 4-8  MC9500-K Imager Decode Ranges
MC9500-K Imager Decode Distances

1. Near distances are field-of-view (FOV) limited.
2. Contrast is measured as Mean Reflective Difference (MRD) at 670 nm.
3. Working range specifications at temperature = 23°C, pitch=18°, roll=0°, skew=0°, photographic quality, ambient light ~30 ft.-c, humidity 45-70% RH.

Color Digital Camera

MC9500-K with an integrated color digital camera have the following features:

- Photo capture
- Video capture
- Omnidirectional reading of a variety of bar code symbologies, including the most popular linear, postal, PDF417, and 2D matrix code types.
- Advanced intuitive aiming for easy point-and-shoot operation.

Digital Camera Scanning

The camera uses digital camera technology to take a digital picture of a bar code, stores the resulting image in its memory, and executes state-of-the-art software decoding algorithms to extract the data from the image.

1. Ensure that a scan-enabled application is loaded on the MC9500-K.
2. Aim the camera lens on the back of the MC9500-K at a bar code.

3. Press and hold the scan button. A preview window appears on the display window with a red aiming reticle in the center. The Decode LED lights red to indicate that scanning is in process.

![Sample Scan Application with Preview Window](image)

4. Move the MC9500-K until the red aiming reticle is over the bar code to scan.

5. The Decode LED lights green and a beep sounds, by default, to indicate the bar code was decoded successfully.

*NOTE* The camera decode feature is set by default to automatically decode the bar code when read. This feature can be programmed to display a green aiming reticle upon good decode indicating that the bar code has been successfully decoded and to that the scan button may be released.

Taking Photos

*NOTE* Ensure that the scanning/imaging application is disabled prior to enabling the camera.

To take a photo:

1. Tap **Start > Programs > Pictures & Videos** icon.
2. Tap **Camera** on the command bar.
3. Check the image on the view finder, adjust if necessary.
4. Press the **Enter** key to take the picture. Hold the MC9500-K still until the shutter sound is heard.

Recording Video

*NOTE* Ensure that the scanning/imaging application is disabled prior to enabling the camera.

To record a video clip:

1. Tap **Start > Programs > Pictures & Videos** icon.
2. Tap **Camera** on the command bar.
3. Tap **Menu > Video** to set shooting mode to video.
   
   The available recording time displays on the screen.
4. Press the Enter key to begin recording.
   Recording stops when you press the Enter button again.

### Viewing Photos and Videos

To view photos and video clips:

1. Tap Start > Programs > Pictures & Videos icon.
2. Tap the picture or video clip to view.

*NOTE* By default, the time limit for recording videos is set to 30 seconds.
Chapter 5 Using the Phone

Introduction

Use the MC9596 and MC9598 to make phone calls, set up speed dials, keep track of calls, and send text messages. Your wireless service provider may also provide other services such as voice mail, call forwarding, and caller ID.

Also use the integrated phone to connect to an ISP or work network in order to browse the Web and read e-mail. Connect to the Internet or work network over High-Speed Downlink Packet Access (HSDPA) (MC9596) or Evolution Data-Optimized (EvDO) (MC9598) using Cellular Line, or using the modem specified by the mobile operator. For more information, or to customize the MC9500-K phone by changing phone settings, see the MC9500-K Mobile Computer Integrator Guide.

Accessing the Phone Keypad

NOTE Keypads vary depending on services and the state of the phone.

Access the keypad regardless of the program in use. Applications on the MC9500-K can be in use during a call.
To access the phone keypad tap Start > Phone, press the F1 key or press the green key.

To receive calls when the MC9500-K is suspended, leave the phone radio turned on and ensure the MC9500-K is set to wake with any key.

**Turning the Phone On and Off**

Windows Mobile 6.1 devices include Wireless Manager, which provides a simple method of enabling and disabling the phone.

To open Wireless Manager, tap the Connectivity icon.

Select Wireless Manager. The Wireless Manager window appears.

To toggle on or off the phone, tap Phone bar.

To configure settings for a connection, tap Menu > Phone Settings.

*NOTE* To receive calls when your device is suspended, leave the phone turned on.
Audio Modes

The MC9500-K offers three audio modes for use during phone calls:

- **Handset Mode**: Switches audio to the speaker at the top front of the MC9500-K, so you can use the MC9500-K as a handset. This is the default mode.
- **Speaker Mode**: Use the MC9500-K as if on speaker phone. Tap the **Speaker On** button to activate this mode. Tap the **Speaker Off** button to switch back to handset mode.
- **Headset Mode**: Connect a Bluetooth headset or a wired headset to automatically switch audio to the headset.

The MC9500-K defaults to handset mode. When a wired headset is plugged into the MC9500-K headset connector or a Bluetooth headset is configured for use with the MC9500-K, the earpiece and speakerphone are muted and audio is heard through the headset.

**NOTE** While using a Bluetooth headset during a call, the mobile computer will not go into suspend mode.

**Using a Wired Headset**

**NOTE** Remove the headset jack plug before connecting the Headset Adapter to the MC9500-K.

You can use a stereo headset for audio communication when using an audio-enabled application. To use a headset, plug the headset jack of the Headset Adapter Cable into the headset connector on the side of the MC9500-K. Plug the Headset connector into the connector on the Headset Adapter Cable. Set the MC9500-K’s volume appropriately before putting the headset on. Plugging a headset into the jack mutes the speaker.
Using a Bluetooth Headset

You can use a Bluetooth headset for audio communication when using an audio-enabled application. See Chapter 7, Using Bluetooth for information on connecting a Bluetooth headset to the MC9500-K. Set the MC9500-K’s volume appropriately before putting the headset on. When a Bluetooth headset is connected the speakerphone is muted.

It is recommended for phone conversations to use the Bluetooth Hands-free profile instead of the Headset profile. See Chapter 7, Using Bluetooth for more information.

**NOTE** When using a Bluetooth headset, during a call, the MC9500-K power button is disabled and the MC9500-K will not go into suspend mode. Once the call is completed, the power button functionality is enabled.

The following dialog box displays when a Bluetooth headset connection is established and the power button is pressed.
**Adjusting Audio Volume**

Use the Volume Control Slider or the keypad keys to adjust the volume of the ringer when not in a call and the audio volume when in a call.

To adjust the volume tap the **Speaker** icon in the **Title** bar. Move the slider up or down to adjust the volume.

**NOTE** Adjust the conversation phone volume during a call. Adjusting the volume while not in a call affects the ring and notification sound levels.

**Hearing Aid Compatibility Setting**

To set the Hearing Aid Compatibility (HAC) setting:

Tap **Start > Settings > System > HAC Settings** icon. The **HAC Settings** window appears.
To enable the HAC feature, tap the **Enable HAC** radio button.
To disable the HAC feature, tap the **Disable HAC** radio button.

---

### Making a Call

**NOTE** You can make emergency calls even when the MC9500-K is locked or when a SIM card is not installed. See *Making an Emergency Call on page 5-9* for more information.

With the MC9500-K, you can make a call from the phone, contacts, speed dial and call history.

### Using the Phone

To make a call using the phone keypad:

1. Tap **Start > Phone** or press the green key.
2. From the **Phone** keypad, tap the number to call.
3. Tap **Talk**.
4. Tap **End** to stop dialing or end the call.

**NOTE** Alternatively, use the green and red keys on the MC9500-K function key to dial (green) and end (red) calls.

If you tap a wrong number, tap Delete key to erase each subsequent digit of a number. To erase the entire number, tap and hold the Delete key.

### Using Contacts

Use Contacts to make a call without looking up or entering the phone number.

To make a call from Contacts:

1. Tap **Start > Contacts**.
2. From the contact list, tap and hold the contact name.
3. Tap **Call Work**, **Call Home** or **Call Mobile**.

**NOTE** To make a call from an open contact, tap the number to call. See On-Device Help for more information about Contacts.

### Creating an Outlook Contact

**NOTE** When entering a contact phone number that contains a star (*) character followed by a plus (+) character, save the contact as an Outlook Contact. Do not save the contact to a SIM card.

To create an Outlook contact:

1. Tap **Start > Contacts**.
2. Tap **New**.
3. If the Phone is on the **Select Contact Type** window displays. Select **Outlook Contact**.

![Creating a Contact](image)

**Figure 5-8** Creating a Contact

4. Using the input panel, tap in each field and enter contact information as needed. Scroll down to see all fields.
5. Tap the arrow next to the **Name:** or **Home addr:** field to open a window for adding more details.
6. To assign the contact to a category, tap **Categories**.
7. To select one or more categories for the contact, select their check boxes. This allows displaying contacts by category in the contact list.
8. Tap **New** to add a category.
9. Enter the name for the category in the text box, and tap **ok**.
10. Tap **ok**.
11. To add notes, tap the **Notes** tab and enter text, draw, or create a recording.
12. When finished, tap **ok** to return to the contact list.

### Editing an Outlook Contact

To make changes to a contact:

1. Tap **Start > Contacts**.
2. Tap the contact in the contact list to open it.
3. Tap Menu > Edit and make the changes.
4. Tap ok.

Deleting a Contact

To delete a contact:

1. Tap Start > Contacts.
2. Tap and hold the contact in the contact list and select Delete Contact from the pop-up menu, or select the contact and tap Menu > Delete Contact.

Creating a SIM Contact

To create a SIM contact:

1. Tap Start > Contacts.
2. Tap New.
3. Select SIM Contact.

NOTE When entering a contact phone number that contains a star (*) character followed by a plus (+) character, save the contact as an Outlook Contact. Do not save the contact to a SIM card.

1. Tap Start > Contacts.
2. Tap New.
3. Select SIM Contact.
4. Using the input panel, tap in each field and enter contact information.
5. When finished, tap ok to return to the contact list.

Using Call History

To make a call using Call History:

1. Tap Start > Phone or press the green key.
2. From the Phone keypad, tap Call History.
3. Tap the phone icon next to the number to begin dialing and return to the phone keypad.

4. Tap **End** or press the red key to stop dialing or end the call.

**Making a Speed Dial Call**

Use Speed Dial to call someone saved in the speed dial directory.

To make a speed dial call:

1. Tap **Start > Phone** or press the green key.

2. From the Phone keypad, tap and hold the speed dial location number assigned to a contact. (To dial a one-digit speed dial location number, tap and hold the speed dial number. To dial a two-digit speed dial location number, tap the first digit and then tap and hold the second digit.)

   or

   From the Phone keypad, tap **Speed Dial** and tap the speed dial location number of the desired contact in the list.

3. To stop dialing or end the call, tap **End** or press the red key.

**Making an Emergency Call**

Your service provider programs one or more emergency phone numbers, such as 911 or 999, that you can call under any circumstances, even when your phone is locked or the SIM card is not inserted. Your service provider can program additional emergency numbers into your SIM card. However, your SIM card must be inserted in your phone in order to use the numbers stored on it. See your service provider for additional information.
When the alpha primary keypad is locked, press the Orange key twice to set the keypad to numeric mode and then enter the emergency number.

*NOTE*  Emergency numbers vary by country. Your phone’s pre-programmed emergency number(s) may not work in all locations, and sometimes an emergency call cannot be placed due to network, environmental, or interference issues.

---

### Answering a Call

A dialog box appears on the MC9500-K when it receives an incoming call. If the phone is set to ring, a ring tone sounds. Answer or ignore the incoming call.

To answer an incoming call tap **Answer** on the **Phone > Incoming...** dialog or press the green key.

To ignore the incoming call tap **Ignore**. This may send the caller to voice mail, depending on the service provider. Otherwise, this presents **Busy** to the calling party.

To end the call tap **End** or press the red key.

### Incoming Call Features

- If you receive a call while in a call, tap **Wait** to place the call in call waiting.
- You can use other programs on the MC9500-K during a call. To switch back to Phone, tap **Talk** or tap **Start > Phone**. Tap **End** to end the call.
- If a caller isn’t in your contact list, create a contact during the call or from Call History by tapping **Menu > Save to Contacts**.
- To terminate a call when a second call comes in and answer the waiting call, tap **End** on the Phone keypad to disconnect the active call, then tap **Answer** or press the **Send** key to answer the waiting call.
- To hold the current call and answer a waiting call, tap **Answer** or press the **Send** key to place the current call on hold and answer the incoming call.
- To put a call on hold to call another number or answer an incoming call, tap **Hold**. To move from one call to another, tap **Swap**.

---

**Figure 5-12  Incoming Call**

To ignore the incoming call tap **Ignore**. This may send the caller to voice mail, depending on the service provider. Otherwise, this presents **Busy** to the calling party.

To end the call tap **End** or press the red key.
Smart Dialing makes it easy to dial a phone number. When you start entering numbers or characters, Smart Dialing automatically searches and sorts the contact entries on the SIM card, in Contacts, and the phone numbers in Call History (including incoming, outgoing, and missed calls). You can then select the desired number or contact from the filtered list to dial.

Open the Phone screen, then tap the keys on the Phone keypad that correspond to the phone number or contact to call. The contact panel lists contacts that match the sequence that you entered.

Smart Dialing starts looking for numbers or contacts that match the sequence entered.

To find a phone number:

- Enter the first one or two digits to find a phone number in Call History.
- Enter the first three digits or more to find a phone number from the saved Contacts and SIM card.

To find a contact name:

- Enter the first letter of a contact’s first name or last name. Smart Dialing searches for the letter starting from the first character of a contact name as well as from the character that appears after a space, dash, or underscore in a contact name. For example, if you tap number “2” which is associated with [a, b, c] on the Phone keypad, contact names such as the following will be considered matches: “Smith, Bernard”, “Adams, John”, “Carlson, Eileen”, “Dillon, Albert”, “Childs, Larry”, “Cooper, Robert” and “Parks, Celine”.
- If the matching list is long narrow down the search further by entering another letter. Using the same example above, tap “3” which is associated with (d, e, f), the matching list is narrowed down to the following names: “Smith, Bernard”, “Adams, John”, and “Parks, Celine”.

To make a call or send a text message using Smart Dialing:

1. Begin entering the first few numbers or characters.
2. In the Smart Dialing panel, use the up and down arrows on the keypad to navigate to the desired contact or phone number.
3. When the correct contact is selected, press TALK to make a voice call.
4. To send a text message to the selected contact, tap Menu > Send Text Message.
5. To call a different phone number associated with the selected contact, tap the contact name and select the phone number to call.
Muting a Call

During a call, you can mute the microphone so you can hear the person on the line but he or she cannot hear conversation from the microphone. This is useful when there is conversation or background noise on your end.

To mute or unmute a call:

1. Tap Start > Phone or press the green key.
2. Make a call.
3. Tap Mute on the display to mute the audio. The Mute icon appears.

Taking Notes

To create a note during a call, tap Note on the display, then enter the note. For more information about creating notes see the Windows On-Device Help.

To access a note created during a call:

1. Tap Start > Phone or press the green key.
2. From the Phone keypad, tap Call History.
3. Tap and hold the number or the Note icon for the phone call entry containing the note.
4. Tap View Note.

5. Tap ok to exit.

\[\textit{NOTE}\] Also access notes directly from the Notes application by tapping \textit{Start} > \textit{Programs} > \textit{Notes}.

---

**Using Speed Dial**

Create speed dial numbers to dial frequently called numbers with a single tap. Before creating a speed dial entry, ensure the phone number exists in Contacts.

**Adding a Speed Dial Entry**

To add a speed dial entry from the phone keypad:

1. Ensure the contact and phone number are in the Contacts list.

2. Tap \textit{Start} > \textit{Phone} or press the green key.

3. Tap \textit{Speed Dial} > \textit{Menu} > \textit{New}.

4. Tap the desired contact name and number in the list.
5. In the **Location** field, tap the up/down arrows to select an available location to assign as the new speed dial entry. The first speed dial location is reserved for voice mail.

6. Tap **ok** to add the contact to the speed dial list.

7. Tap **ok** to exit the **Speed Dial Contact List**.

To add a speed dial entry from the **Contacts** window:

1. Tap **Start > Contacts**.

2. Tap a contact name.

3. Tap **Menu > Add to Speed Dial**.
4. Tap the up/down arrows to select an available location to assign as the new speed dial entry. The first speed dial location is reserved for voice mail.

5. Tap ok.

**Editing a Speed Dial Entry**

1. Tap **Start > Phone** or press the green key.

2. Tap **Speed Dial**.

3. Tap and hold the contact name.

4. Tap **Edit...**

5. Change the name, phone number, or location information.

6. Tap **ok**.

*NOTE* Editing names and phone numbers in **Speed Dial** does not alter contact information in **Contacts (Start > Contacts)**.
Deleting a Speed Dial Entry

1. Tap **Start > Phone** or press the green key.
2. Tap **Speed Dial**.
3. Tap and hold the contact name.
4. Tap **Delete**.
5. Tap **Yes** to confirm permanently deleting the speed dial entry.

![Speed Dial Delete Menu](image)

**Figure 5-21**  *Speed Dial Delete Menu*

NOTE  Deleting names and phone numbers in **Speed Dial** does not delete the contact information in **Contacts** *(Start > Contacts)*.

Using Call History

Use Call History to call someone who was recently called, or recently called in. Call History provides the time and duration of all incoming, outgoing, and missed calls. It also provides a summary of total calls and easy access to notes taken during a call. Table 4-1 lists the call history icons that appear in the **Call History** window.

**Table 5-1**  *Call History Icons*

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Icon" /></td>
<td>This icon appears next to the contact information for all <strong>outgoing</strong> calls.</td>
</tr>
<tr>
<td><img src="image" alt="Icon" /></td>
<td>This icon appears next to the contact information for all <strong>incoming</strong> calls.</td>
</tr>
<tr>
<td><img src="image" alt="Icon" /></td>
<td>This icon appears next to the contact information for all <strong>missed</strong> calls.</td>
</tr>
</tbody>
</table>

Managing Call History

Change views, reset the call timer, and delete calls to manage the calls stored in Call History.
Changing the Call History View

1. Tap **Start > Phone** or press the green key to display the Phone keypad.
2. From the Phone keypad, tap **Call History**.
3. Tap **Menu > Filter** to show the menu.

![Call History - All Calls/Show Menu](image)

4. Select a view type from the menu to display only missed calls, outgoing calls, incoming calls, or calls listed alphabetically by caller name.
5. Tap **ok** to exit the **Call History** window.

Resetting the Recent Calls Counter

1. Tap **Start > Phone** or press the green key to display the Phone keypad.
2. From the Phone keypad, tap **Call History**.
3. Tap **Menu**.

![Call History - Tools Menu](image)

4. Select **Call Timers...**.
5. Tap **Reset**. (The **All Calls** counter cannot be reset.)
6. Tap **ok** to exit the **Call Timers** window.
Deleting Call History Items by Call Date
1. Tap Start > Phone or press the green key to display the Phone keypad.
2. From the Phone keypad, tap Call History.
3. Tap Menu > Call Timers...
4. In the Delete call history items older than: drop-down list select a time period on which to base deletion of stored items.
5. Tap ok to exit the Call Timers window.

Deleting All Call History Items
1. Tap Start > Phone or press the green key to display the Phone keypad.
2. From the Phone keypad, tap Call History.
3. Tap Menu.
4. Select Delete all calls.
5. Tap Yes.
6. Tap ok to exit the Call History window.

Viewing Call Status
1. Tap Start > Phone or press the green key to display the Phone keypad.
2. From the Phone keypad, tap Call History.
3. Tap an entry. The Call Status window appears.
4. Tap **ok** and then **ok** to exit.

**Using the Call History Menu**

Use the **Call History** menu to dial voice mail, access the Activation Wizard, save to contacts, view a note, delete a listing, send an SMS, and make a call.

1. Tap **Start > Phone** or press the green key to display the Phone keypad.
2. From the Phone keypad, tap **Call History**.
3. Tap and hold an item in the list.

![Call History - Menu](image)

4. Select an applicable item from the menu, as needed.
5. Depending on the item selected, the appropriate window displays. For example, select **Send Text message** to display the **Text Messages** window.

![Call History - Detail](image)

6. Tap **ok** to exit the **Call History** window.

**NOTE** When more than one call is on the phone line, only the duration of the first call is recorded.
Swapping Calls on an MC9596

To move between two or more phone calls:

1. Tap **Start > Phone** or press the green key to display the Phone keypad.

2. Enter the first phone number and press **Talk**. When the call connects, **Hold** appears on the keypad.

3. Tap **Hold** on to place the first number on hold.

4. Enter the second number and tap **Talk**.

5. Tap **Swap** to move from one call to the other.

6. Tap **End** or press the red key to end each call.

---

Swapping Calls on an MC9598

To swap between two incoming phone calls:

1. Tap **Answer** to connect to the first call.
2. When a second call arrives, tap Answer. The first call is placed on hold.

3. Tap Talk to swap from one call to the other.

4. Tap End or press the red key to end active call. The remaining call re-connects, tap Answer to connect to the call.

5. Tap End or press the red key to end the last call.

**Conference Calling on an MC9596**

- **NOTE** Conference Calling and the number of conference calls allowed may not be available on all services. Please check with your service provider for Conference Calling availability.

To create a conference phone session with multiple people:

1. Tap Start > Phone or press the green key to display the Phone keypad.

2. Enter the first phone number and press Talk. When the call connects, Hold appears on the keypad.
3. Tap **Hold** to place the first call on hold.

4. Enter the second phone number and tap **Talk**.

5. After the call is answered, tap **Menu > Conference** to place the calls in conference mode.

6. Tap **Hold** to place the conference on hold.

7. Enter another phone number and tap **Talk**.

8. After the call is answered, tap **Menu > Conference** to place all the calls in conference mode.

9. Repeat steps 6 through 8 for up to six phone numbers.

10. Tap **End** or press the red key to end the conference call.

   **NOTE** To speak privately with one party during a conference call, tap **Menu > Private**. To include all parties again, tap **Menu > Conference**.
Three-way Calling on an MC9598

NOTE  Three-way Calling may not be available on all services. Please check with your service provider for availability.

To create a three-way phone session with two people and you as the initiator:

1. Tap Start > Phone or press the green key to display the Phone keypad.
2. Enter the first phone number and press Talk.
3. To call a second person, tap Keypad. Enter the second number and tap Talk.
4. When the second person answers the call, tap Talk to create a three-way calling session.
5. Tap Talk to drop the last call.
6. Tap End to drop the first call.
Text Messaging

Use the Text Messages window to send and receive text messages to and from mobile phones. The text can contain words, numbers, or an alphanumeric combination no longer than 160 characters.

Short text messages delivered over mobile networks transmit from the sending MC9500-K, are stored in a central short message center, then forwarded to the destination mobile device. If the recipient is not available, the message is stored and can be sent later.

Viewing Text Messages

To view a text message:

You can view a text message whether the phone is on or off. When the phone is on, you can view a text message from its notification callout. Tap the text message notification icon on the navigation bar to display the message.

The Caller Identification feature matches incoming text message numbers with those stored in Contacts so you know who is sending you a message. Furthermore, the New Text Message dialog box gives you the option to call the sender or save, dismiss, or delete the message.

When the phone function is off, you can still view received text message in Messaging:
1. Tap **Start > Messaging > Text Messages**, or on the Today screen, tap **Text Messages**.

   ![Figure 5-38 Text Messaging on Today Screen](image1)

   Text Messages window appears.

   ![Figure 5-39 Messaging Window](image2)

2. In the message list, tap a text message. The window displays previous text conversations.

   ![Figure 5-40 Text Message - Conversation](image3)
To reply, enter text in the reply field and tap **Send**.

✓ **NOTE** If the phone is turned off and you tried to call the sender, send a reply, or forward the message, you are prompted to turn the phone function on.

### Sending a Text Message

To create a text message:

1. On the **Phone** screen, select a contact name that you want to send a message to.
2. Tap **Menu > Send Text Message**.

![Figure 5-41 Phone Screen Contact List](image)

3. Compose your message.

![Figure 5-42 Create Text Message](image)

- The auto-correct feature automatically fixes common spelling errors as you type so your messages are more accurate.
- The character counter lets you see and control the size of the message as you compose.
- If you want to know if your text message was received, tap **Menu > Message Options**, then select the **Request message delivery notification** check box.
4. Tap **Send** when you've finished the message.

   If the phone is turned on, your text message is sent. If it's off, you are prompted to turn on the phone. If you do so, the message is sent; otherwise when you tap **ok**, the message is saved in the **Drafts** folder and sent when the phone is turned on.

   If you are out of coverage area, the message is saved in the **Drafts** folder and sent when you return to a coverage area.

   **NOTE** On the MC959X-K, the message remains in the **Drafts** folder and has to be manually re-sent when you return to a coverage area.
Establishing a MC9596 Data Connection

5. Ensure a SIM card is installed in the MC9500-K.

7. Tap the connectivity icon H, G or E at the top of the screen.

![Connectivity Dialog Box](image)

8. Tap Settings.

9. Tap Connections icon.

10. Tap Managing existing connections.

11. Tap and hold on the data connection until a menu appears.

![Data Connection](image)

12. Select Connect.
13. If the SIM card is protected with a Personal Identification Number (PIN), a dialog box pops up requesting the appropriate PIN to unlock the SIM card. In this case, enter the PIN and tap ok.

   ✓ **NOTE** Place emergency calls at any time, without entering a PIN or a SIM card.

14. When a connection is established, launch Internet Explorer to browse the Internet or launch an applicable application.

### Ending a Data Connection

To cancel a data connection in progress, tap Cancel in the Connecting... dialog window.

To end an established data connection:

1. Tap H, G or E to display the Connectivity dialog box.

   ![Connectivity Dialog Box](image)

   **Figure 5-47  Connectivity Dialog Box**

2. Tap Disconnect.

   ✓ **NOTE** Tapping Disconnect during an active data transfer (e.g., downloading a web page) automatically reconnects the connection. You cannot disconnect the connection until the data transfer is complete.
Establishing an MC9598 Data Connection

NOTE Ensure that you have data service activated with your service provider.

A data connection allows Internet access across a wireless network. Data connection is pre-packaged with service accounts.

To verify active data service:

1. Tap Start > Internet Explorer.
2. In the address bar, enter a URL for a web site.
3. Tap to display the Connectivity dialog. The dialog box displays the data connection information.

Ending a Data Connection

To cancel a data connection in progress, tap Cancel in the Connecting... dialog window.

To end an established data connection:

1. Tap to display the Connectivity dialog box.
2. Tap Disconnect.

✓ **NOTE** Tapping Disconnect during an active data transfer (e.g., downloading a web page) automatically reconnects the connection. You cannot disconnect the connection until the data transfer is complete.
Chapter 6 Using GPS Navigation

Introduction

The MC9500-K includes Global Positioning System (GPS) technology using the SiRFstar III chipset. GPS technology is based on a worldwide system of GPS satellites orbiting the earth that continuously transmit digital radio signals. These radio signals contain data on the satellites' locations and their exact clock time and are used to determine your location on the earth.

**WARNING!** When using the MC9500-K in a vehicle, it is the user's responsibility to place, secure and use in a manner that will not cause accidents, personal injury or property damage or obstruct their view. It is the responsibility of the driver to operate the vehicle in a safe manner, maintain observation of all driving conditions at all times, and not become distracted by the device to the exclusion of safe driving practices. It is unsafe to operate the controls of the device while driving.

Software Installation

Third-party GPS navigation software is required. Evaluation software is available from various suppliers. For example; VisualGPS, visit: http://www.visualgps.net/VisualGPSce/

If interested in purchasing GPS navigation software check with the GPS software vendor (before purchasing, downloading, or installing any software) to determine that the application is compatible with the MC9500-K. Refer to the application’s user guide for application installation and setup information.

MC9500-K GPS Setup

The GPS-enabled MC9500-K uses Microsoft Windows Mobile 6, so the operating system automatically manages access to the GPS receiver to allow multiple programs to simultaneously access GPS data.

Ensure that the following settings are set on the MC9500-K:

1. Tap **Start > Settings > System > External GPS** icon.
2. In the **Programs** tab, ensure that the **GPS program port** drop-down list is set to **None**.
3. In the **Hardware** tab, ensure that the **GPS hardware port** drop-down list is set to **COM8**.
4. Ensure that the **Baud rate** drop-down list is set to **57600**.

5. Tap **ok** to close the **Setting** window.

> **NOTE** User can select COM port from the GPS program port drop-down list. If an application error message appears indicating that the COM port cannot be opened, ensure that a free COM port is selected.

---

**Operation**

Acquiring satellite signals may take several seconds to a few minutes. It is best to be outside and have a clear, unobstructed view of the sky. Without a clear view, acquisition takes much longer and could result in the MC9500-K being unable to compute the initial position quickly. When operating the device indoors access to the GPS signals may be limited or unavailable.

> **NOTE** When using a GPS navigation application, ensure that the MC9500-K does not go into suspend mode. If the MC9500-K suspends then the power to the GPS radio is removed. Upon resume the GPS receiver must reacquire a valid GPS signal, resulting in a delay of positional information.

**GPS Maps on microSD Cards**

GPS navigation software vendors may sell maps on microSD cards. If using a microSD card with the GPS navigation software install the microSD memory card using procedure in *Installing a microSD Card on page 1-3*.

**Answering a Phone Call While Using GPS**

If you receive a phone call while using your GPS navigation software:

1. Answer the phone call by pressing the **Answer** button.

2. Once you end the phone call, press the **End Call** button to resume the audio on the GPS software.

> **NOTE** Anytime you are using GPS on the MC9500-K and you receive a phone call, the audio on the GPS navigation software is muted until you finish the call.

**Losing the GPS Signal While in a Vehicle**

GPS performance on the MC9500-K may be affected if the vehicle has thermal glass windows and windshields, which can block the MC9500-K from receiving a GPS signal from satellites. To improve GPS signal strength, place the MC9500-K where there is a clear view of the sky. A direct line of sight is required between the MC9500-K and the GPS satellites to access information from the satellites.

The Global Positioning System (GPS) is a system that allows the user to track their position anywhere on the earth.

---

**Assisted GPS**

GPS can be used in stand-alone or Assisted GPS (A-GPS) modes. A Stand-alone GPS receiver downloads data from GPS satellites. In certain environments, it can take several minutes to get a fix. By using GPS Location servers, A-GPS dramatically reduces the TTFF (Time To First Fix) and improves the sensitivity of GPS receivers by providing them with data that they would ordinarily have to download from the GPS satellites. With the A-GPS data, GPS receivers can operate faster and more reliably.
A-GPS follows the Secure User Plane Location (SUPL) protocol which allows a mobile device to communicate with a SUPL server. Refer to the EMDK Help file for information on setting up SUPL on the MC9500-K.
Chapter 7 Using Bluetooth

Introduction

Bluetooth-equipped devices can communicate without wires, using frequency-hopping spread spectrum (FHSS) radio frequency (RF) to transmit and receive data in the 2.4 GHz Industry Scientific and Medical (ISM) band (802.15.1). Bluetooth wireless technology is specifically designed for short-range (30 feet/10 meters) communication and low power consumption.

MC9500-Ks with Bluetooth capabilities can exchange information (e.g., files, appointments, and tasks) with other Bluetooth enabled devices such as phones, printers, access points, and other mobile computers. To use the MC9500-K as a modem, create a dial-up modem connection between a computer and MC9500-K.

The MC9500-K with Bluetooth technology uses either the StoneStreet Bluetooth stack or the Microsoft Bluetooth stack. To write an application that uses the StoneStreet One Bluetooth stack APIs, refer to the Enterprise Mobility Developer Kit (EMDK) Help.

Adaptive Frequency Hopping

Adaptive Frequency Hopping (AFH) is a method of avoiding fixed frequency interferers, and can be used with Bluetooth voice. All devices in the piconet (Bluetooth network) must be AFH-capable in order for AFH to work. There is no AFH when connecting and discovering devices. Avoid making Bluetooth connections and discoveries during critical 802.11b communications. AFH for Bluetooth consists of four main sections:

- Channel Classification - A method of detecting an interference on a channel-by-channel basis, or pre-defined channel mask.
- Link Management - Coordinates and distributes the AFH information to the rest of the Bluetooth network.
- Hop Sequence Modification - Avoids interference by selectively reducing the number of hopping channels.
- Channel Maintenance - A method for periodically re-evaluating the channels.

When AFH is enabled, the Bluetooth radio “hops around” (instead of through) the 802.11b high-rate channels. AFH coexistence allows Motorola mobile computers to operate in any infrastructure.
The Bluetooth radio in this MC9500-K operates as a Class 2 device power class. The maximum output power is 2.5mW and the expected range is 32.8 feet (10 meters). A definition of ranges based on power class is difficult to obtain due to power and device differences, and whether one measures open space or closed office space.

**NOTE** It is not recommended to perform Bluetooth wireless technology inquiry when high rate 802.11b operation is required.

---

**Security**

The current Bluetooth specification defines security at the link level. Application-level security is not specified. This allows application developers to define security mechanisms tailored to their specific need. Link-level security occurs between devices, not users, while application-level security can be implemented on a per-user basis. The Bluetooth specification defines security algorithms and procedures needed to authenticate devices, and if needed, encrypt the data flowing on the link between the devices. Device authentication is a mandatory feature of Bluetooth while link encryption is optional.

Pairing of Bluetooth devices is accomplished by creating an initialization key that is used to authenticate the devices and create a link key for them. Entering a common PIN number in the devices being paired generates the initialization key. The PIN number is never sent over the air. By default, the Bluetooth stack responds with no key when a key is requested (it is up to user to respond to the key request event). Authentication of Bluetooth devices is based-upon a challenge-response transaction. Bluetooth allows for a PIN number or passkey that is used to create other 128-bit keys used for security and encryption. The encryption key is derived from the link key used to authenticate the pairing devices. Also worthy of note is the limited range and fast frequency hopping of the Bluetooth radios that makes long-distance eavesdropping difficult.

Recommendations are:

- Perform pairing in a secure environment
- Keep PIN codes private and don't store the PIN codes in the mobile computer
- Implement application-level security.

The Microsoft stack supports Smart-pairing. For detailed information, refer to the Microsoft MSDN.
Bluetooth Configuration

By default, the MC9500-K is configured to using the StoneStreet One Bluetooth stack. Refer to the *MC9500-K Mobile Computer Integrator Guide*, Appendix B, for information on switching to the Microsoft Bluetooth stack.

If the MC9500-K is configured to use the StoneStreet One Bluetooth stack, the Bluetooth icon appears at the bottom right corner of the Today screen. If the Microsoft Bluetooth stack is configured, the Bluetooth icon does not appear.

![Bluetooth Icon Image](image)

Bluetooth Power States

Cold Boot

With StoneStreet One Bluetooth Stack
Performing a cold boot on the MC9500-K turns off Bluetooth after initialization (which takes a few moments). It is normal to see the Bluetooth icon appear and disappear, as well as a wait cursor, when initialization proceeds in all modes.

With Microsoft Bluetooth Stack
Performing a cold boot retain the state of the Bluetooth radio prior to the cold boot.

Warm Boot

With StoneStreet One Bluetooth Stack
Performing a warm boot on the MC9500-K turns off Bluetooth.

With Microsoft Bluetooth Stack
Performing a warm boot retain the state of the Bluetooth radio prior to the warm boot.

Suspend

When there is an active Bluetooth connection, the Bluetooth radio goes into low power mode maintaining the active connection. When there is no active connection, the Bluetooth radio turns off.

With StoneStreet One Bluetooth Stack

✓ NOTE If there is an active Bluetooth connection between the MC9500-K and another Bluetooth device, the MC9500-K will not timeout. However, if the user presses the Power button on the MC9500-K, the MC9500-K will suspend (except when on a call) and upon receiving data from a remote Bluetooth device, the MC9500-K will wake from suspend mode. For example, headset redial or Bluetooth scanner sending data to the MC9500-K.

With Microsoft Bluetooth Stack

✓ NOTE If there is an active Bluetooth connection between the MC9500-K and another Bluetooth device and there is no data activity, the MC9500-K will timeout. However, if the user presses the Power button on the MC9500-K, the MC9500-K will suspend (except when on a call) and upon receiving data from a remote Bluetooth device, the MC9500-K will wake from suspend mode. For example, headset redial or Bluetooth scanner sending data to the MC9500-K.
Resume

When the MC9500-K resumes, Bluetooth turns on if it was on prior to suspend.

Using Microsoft Bluetooth Stack

The following sections provide information on using the Microsoft Bluetooth stack.

Turning the Bluetooth Radio Mode On and Off

Turn off the Bluetooth radio to save power or if entering an area with radio restrictions (e.g., an airplane). When the radio is off, other Bluetooth devices cannot see or connect to the MC9500-K. Turn on the Bluetooth radio to exchange information with other Bluetooth devices (within range). Communicate only with Bluetooth radios in close proximity.

NOTE To achieve the best battery life turn off radios not in use.

Enabling Bluetooth

To enable Bluetooth:

1. Tap Wireless Manager and then tap the Bluetooth bar or
   Tap Start > Setting > Connections > Bluetooth icon > Mode tab.

2. Check the Turn On Bluetooth checkbox.

3. Tap ok.

Disabling Bluetooth

To disable Bluetooth:

1. Tap Wireless Manager and then tap the Bluetooth bar or
   Tap Start > Setting > Connections > Bluetooth icon > Mode tab.

2. Un-check the Turn On Bluetooth checkbox.
3. Tap ok.

Discovering Bluetooth Device(s)

The MC9500-K can receive information from discovered devices without bonding. However, once bonded, the MC9500-K and a bonded device exchange information automatically when you turn the Bluetooth radio on. See Bonding with Discovered Device(s) on page 7-34 for more information.

To find Bluetooth devices in the area:

1. Ensure that Bluetooth is enabled on both devices.
2. Ensure that the Bluetooth device to discover is in discoverable and connectable modes.
3. Ensure that the two devices are within 30 feet (10 meters) of one another.
4. Tap Start > Settings > Connections tab > Bluetooth icon > Devices tab.

![Figure 7-3 Bluetooth - Devices Tab](image)

5. Tap Add new device. The MC9500-K begins searching for discoverable Bluetooth devices in the area.

![Figure 7-4 Searching for Bluetooth Devices](image)

6. Select a device from the list.
7. Tap **Next**. The **Enter Passcode** window appears.

   **NOTE** If Smart-pairing is configured and the device is requesting one of the pre-defined PINs, the **Enter Passcode** window does not appear.

8. Enter the Passcode on the other device. The device is added to the Bluetooth list.
You are prompted to enter a passcode. If the device has a specific passcode, enter it in the Passcode field and tap Next. If the device does not have a specific passcode, enter a passcode in the Passcode field and tap Next. The Bluetooth radio tries to connect with the device.

9. If you created a passcode, you will be prompted by the other device to enter the same passcode. Enter the created passcode to establish a paired connection. (If you entered a passcode from the device, you shouldn’t have to do anything on the other device.)

10. When the connection is complete, a list of matching and supported services on the device appears.

11. Select the services you want to use and tap Finish. The services on the new devices have to be selected or else the pairing won’t include those services, even though the devices are paired. If services are not selected, you will be continually reprompted for the passcode from the device.

12. The device appears in the list on the main window.

After the passcodes have been accepted on both sides, you have a trusted (“paired”) connection.

**Available Services**

**NOTE** Some devices might not require a PIN. This depends upon the device’s authentication.

The MC9500-K with Microsoft Bluetooth stack offers the following services:

- OBEX Object Push Services via Beam
- Hands-Free Audio Gateway Services
- Serial Port Services
- Personal Area Networking Services
- PBAP Services
- Dial-up Networking
- HID Client
- A2DP/AVRCP.

See the following sections for information on these services.
Object Push Services via Beam

NOTE You can only send files to a remote device using the Beam function.

Use the OBEX Push Service to send files and contacts to another Bluetooth device. To transfer files between the MC9500-K and another Bluetooth enabled device:

1. Ensure that Bluetooth is enabled and discoverable on both devices.
2. Ensure that the two devices are within 30 feet (10 meters) of one another.
3. Tap Start > Programs > File Explorer.
4. Navigate to the file to transfer.
5. Tap and hold on the filename until the pop-up menu appears.

Figure 7-8  File Explorer Window

7. Tap Tap to send next to the Bluetooth device to send the file to. The MC9500-K communicates with the device and sends the file. When completed, Tap to send changes to Done.

Figure 7-9  Beam File Window

To transfer a contact between the MC9500-K and another Bluetooth enabled device:

1. Ensure that Bluetooth is enabled and discoverable on both devices.
2. Ensure that the two devices are within 30 feet (10 meters) of one another.

3. Tap **Start > Contacts**

4. Navigate to the contact to transfer.

5. Tap and hold on the contact until the pop-up menu appears.

![Contact Window](figure7-10.png)

**Figure 7-10  Contact Window**

6. Select **Send Contact > Beam**. The MC9500-K searches for Bluetooth devices in the area.

7. Tap **Tap to send** next to the Bluetooth device to send the file to. The MC9500-K communicates with the device and send the contact. When completed, **Tap to send** changes to **Done**.

### Internet Sharing

Internet Sharing allows the user to connect a computer or laptop to the MC9500-K and use the MC9500-K as a modem to connect to an office network or ISP.

To use MC9500-K as a modem using Bluetooth:

1. Ensure that the device is not connected to the computer or laptop.

2. On the MC9500-K, ensure that the Phone is on and a data connection is configured.

3. Tap > **Programs > Internet Sharing**.

4. In the **PC Connection** list, select **Bluetooth PAN**.

5. In the **Network Connection** list, select the connection type.

   Select the network connection that the device should use to connect to the Internet.

6. Tap **Connect**.

7. On the computer or laptop, setup a Bluetooth PAN with your device.

   a. Select **Start > Control Panel > Network Connections**.

   b. Under **Personal Area Network**, select **Bluetooth Network Connection**.

   c. Right-click on **Bluetooth Network Connection** and select **View Bluetooth** network devices.

   d. In the **Bluetooth Personal Area Network Devices** window select your device.
e. Click **Connect**. The computer connects to the device via Bluetooth.

**NOTE** If your computer is Bluetooth-enabled and you select Bluetooth as the PC connection, you must initiate and complete the Bluetooth PAN partnership before Internet Sharing will work. For more information, refer to Windows Help and Support.

8. To verify, on the PC or laptop, launch **Internet Explorer** and open a web site.

9. To end dial-up networking, on the MC9500-K tap **Disconnect**.

**Hands-free Services**

To connect to a Bluetooth headset:

**NOTE** Newer Bluetooth headsets are device dependant and remember the last device they connected to. If problems occur while connecting to the headset, place the headset in discovery mode. Refer to the headset user manual for more information.

- Only WAN audio is routed to the headset. System audio is still emitted through the MC9500-K speaker.
- You can accept calls and re-dial using the Hands-free profile.
- Hands-free profile does not support 3-way calling.

1. Ensure that Bluetooth is enabled and discoverable on both devices.

2. Ensure that the two devices are within 30 feet (10 meters) of one another.

3. Tap **Start > Settings > Connections > Bluetooth** icon.

4. Tap New device. The MC9500-K searches for Bluetooth devices in the area.

5. Select the headset name and tap **Next**. The Passcode window appears.

6. Enter the headset’s passcode.

7. Tap **Next**. The MC9500-K connects to the headset. Refer to the headset user manual for instructions on communicating with a Bluetooth device.

**NOTE** During an active connection, the MC9500-K cannot go into suspend mode when the Power Button is pressed. A message appears notifying the user.

- Once the WAN call is disconnected (with Hands-free profile) the Power button is enabled.
Serial Port Services

Use the wireless Bluetooth serial port connection as you would a physical serial cable connection. Configure the application that will use the connection to the correct serial port.

To establish a serial port connection:

1. Ensure that Bluetooth is enabled and discoverable on both devices.
2. Ensure that the two devices are within 30 feet (10 meters) of one another.
3. Tap Start > Settings > Connections tab > Bluetooth icon > Devices tab.
5. Select a device from the list.
6. Tap Next. The Enter Passcode window appears.
7. Enter the Passcode and the tap Next. The device is added to the Bluetooth list.
8. In the device list, tap the serial device. The Partnership Settings window displays.
9. Select the Serial Port checkbox.
10. Tap Save.
11. Tap COM Ports tab.
12. Tap New Outgoing Port. The add device window appears.
13. Select the serial device in the list and then tap Next.
14. Select a COM port from the drop-down list.
15. Tap Finish.

NOTE If Smart-pairing is configured and the device is requesting one of the pre-defined PINs, the Enter Passcode window does not appear.

NOTE No connection is made at this point. An application must open the selected COM port to trigger Microsoft Bluetooth stack to open the connection.
ActiveSync Using Serial Port Services

Use the wireless Bluetooth serial port connection for ActiveSync just as you would a physical serial cable connection. You must configure the application that will use the connection to the correct serial port.

To set up a Bluetooth ActiveSync connection:

Before setting up a Bluetooth ActiveSync connection, configure the Bluetooth function of your device.

1. Ensure that Bluetooth is enabled and discoverable on both devices.
2. Ensure that the two devices are within 30 feet (10 meters) of one another.
3. On the computer, click **Start** > **Settings** > **Control Panel**.
4. Double-click **Bluetooth Devices**.
5. On the **Options** tab, select the **Turn discovery on** and **Allow Bluetooth devices to connect to this computer** checkboxes.

   ![Bluetooth Devices Window](Image)

   **Figure 7-12  Computer Bluetooth Devices Window**

6. On the **COM Ports** tab, click **Add**.
7. Select the **Incoming (device initiates the connection)** option, then click **OK**.
   
   Note the number of the COM port that was added.
8. Click **OK**.
9. Click **Start** > **All Programs** > **Microsoft ActiveSync**.
10. Click **File** > **Connection Settings**.
7. On the **Allow connections to one of the following** drop-down list, select the COM port with the number you noted earlier.

12. On the MC9500-K, tap **Start > Programs > ActiveSync**.

13. Tap **Menu > Connect via Bluetooth**.

   Synchronization is automatically initiated. The **ActiveSync** icon appears on the lower right corner of the Today screen.

   If an Authentication is required, the **Enter Passcode** screen appears, type an alphanumeric passkey (PIN code), then tap **Next**; enter the same passkey on the other device.

   The passkey is recommended for enhanced security. Your passkey must be between 1 to 16 alphanumeric characters.

   If you do not want to use a passkey, tap **Next**.

14. To disconnect the ActiveSync connection, tap the **ActiveSync** icon on the Today screen.

15. Tap **Disconnect**.

---

**Phone Book Access Profile Services**

Phone Book Access profile (PBAP) is used to synchronize contacts between a remote device and the MC9500-K. To establish a PBAP synchronization:

1. Ensure that Bluetooth is enabled and discoverable on both devices.

2. Ensure that the two devices are within 30 feet (10 meters) of one another.

3. Tap **Start > Settings > Connection** tab > **Bluetooth** icon > **Devices** tab.

4. Tap **Add New Device**. The MC9500-K searches for a Bluetooth device, such as a Car Kit.

5. Select a device from the list.

6. Tap **Next**. The **Enter Passcode** window appears.

   **NOTE** If Smart-pairing is configured and the device is requesting one of the pre-defined PINs, the **Enter Passcode** window does not appear.

7. Enter the Passcode and the tap **Next**. The device is added to the Bluetooth list.
8. A dialog box appears requesting if you want to transfer contacts to the car kit.

9. Select Yes or No.

10. If Yes is selected, contacts from the MC9500-K are transferred to the car kit.

**Dial-Up Networking Services**

Dial-up networking allows the user to connect a PC or laptop to the MC9500-K and use the MC9500-K as a modem to connect to an office network or ISP.

Before setting up dial-up networking, obtain dial-up information and other necessary settings (username, password and domain name, if required) for the office network or ISP. To create a new Bluetooth connection:

1. Ensure the MC9500-K is discoverable and connectable.
2. On the PC or laptop, set up Bluetooth according to the manufacturer’s instructions.
3. On the PC or laptop Bluetooth software, search for the MC9500-K and select the Dial-up Networking service.
4. Using dial-up software on the PC or laptop, connect to the MC9500-K.
5. The MC9500-K phone function dials the ISP number and connects to the ISP.
6. To verify, on the PC or laptop, launch Internet Explorer and open a web site.

**Connect to a HID Device**

The MC9500-K can connect to a Human Interface Device (HID) device such as a Bluetooth keyboard or mouse:

1. Ensure that Bluetooth is enabled on both devices.
2. Ensure that the Bluetooth device to discover is in discoverable and connectable modes.
3. Ensure that the two devices are within 30 feet (10 meters) of one another.
4. Tap Start > Settings > Connections tab > Bluetooth icon > Devices tab.
5. Tap Add new device. The MC9500-K begins searching for discoverable Bluetooth devices in the area.
6. Select a HID device from the list.
7. Tap Next. The Enter Passcode window appears. Refer to the device’s User Manuals for more information.

8. Tap Connect. The MC9500-K connects to the HID device.

**A2DP/AVRCP Services**

A2DP/AVRCP is used to connect to a high-quality stereo headset:

1. Ensure that Bluetooth is enabled on both devices.
2. Ensure that the Bluetooth device to discover is in discoverable and connectable modes.
3. Ensure that the two devices are within 30 feet (10 meters) of one another.
4. Tap Start > Settings > Connections tab > Bluetooth icon > Devices tab.
5. Tap **Add new device**. The MC9500-K begins searching for discoverable Bluetooth devices in the area.

6. Select a stereo headset from the list.

7. Tap **Next**. The **Enter Passcode** window appears. Refer to the device’s User Manuals for more information.

   ✓ **NOTE** If Smart-pairing is configured and the device is requesting one of the pre-defined PINs, the **Enter Passcode** window does not appear.

8. Tap **Connect**. The MC9500-K connects to the stereo headset.

For stereo headsets that can use hands-free services, connect to the hands-free service after connecting to the A2DP service:

1. Tap **Start** > **Settings** > **Connections** tab > **Bluetooth** icon > **Devices** tab.

2. Tap **Add new device**. The MC9500-K begins searching for discoverable Bluetooth devices in the area.

3. Select a stereo headset from the list.

4. Tap **Next**. The **Enter Passcode** window appears. Refer to the device’s User Manuals for more information.

   ✓ **NOTE** If Smart-pairing is configured and the device is requesting one of the pre-defined PINs, the **Enter Passcode** window does not appear.

5. Tap **Connect**. The MC9500-K connects to the stereo headset.
Using StoneStreet One Bluetooth Stack

The following sections provide information on using the StoneStreet One Bluetooth stack.

Turning the Bluetooth Radio Mode On and Off

Turn off the Bluetooth radio to save power or if entering an area with radio restrictions (e.g., an airplane). When the radio is off, other Bluetooth devices cannot see or connect to the MC9500-K. Turn on the Bluetooth radio to exchange information with other Bluetooth devices (within range). Communicate only with Bluetooth radios in close proximity.

∇ NOTE  To achieve the best battery life turn off radios not in use.

Disabling Bluetooth

To disable Bluetooth, tap Bluetooth icon > Disable Bluetooth. The Bluetooth icon changes to indicate that Bluetooth is disabled.

![Figure 7-14 Disable Bluetooth](image)

Enabling Bluetooth

To enable Bluetooth, tap Bluetooth icon > Enable Bluetooth. The Bluetooth icon changes to indicate that Bluetooth is enabled.

![Figure 7-15 Enable Bluetooth](image)

Modes

The BTExplorer application has two modes for managing Bluetooth connections: Wizard Mode and Explorer Mode. The Wizard Mode is for novice Bluetooth users and the Explorer Mode is for experienced Bluetooth users. To switch between modes, select View > Wizard Mode or View > Explorer Mode.

Wizard Mode

Wizard Mode provides a simple process for discovering and connecting to Bluetooth devices.

∇ NOTE  Switching between Wizard Mode and Explorer Mode closes all active connections.
Wizard Mode shows the devices and services in a simple Favorites view created by following the step-by-step wizard.

**Explorer Mode**

The **Explorer Mode** window is easy to navigate and provides greater control to users familiar with Bluetooth. The menu bar provides quick access to the options and tools used to connect to devices. To access Explorer Mode, tap **View > Explorer Mode**.

![Explorer Mode Window](image)

**Figure 7-16  Explorer Mode Window**

You can also use the “tap and hold” technique to view available options. Scroll bars and view options are similar to those on the Windows desktop. The tree structure lists the following sub-items:

- Local Device - This device
- Remote Device - Other Bluetooth devices
  - Trusted Devices - Bonded (paired) Bluetooth devices
  - Untrusted Devices - Discovered devices that are not bonded
- Favorites - Selected services that are set as *Favorite* for quick access.

**NOTE** Switching between Wizard Mode and Explorer Mode closes all active connections.

**Discovering Bluetooth Device(s)**

The MC9500-K can receive information from discovered devices without bonding. However, once bonded, the MC9500-K and a bonded device exchange information automatically when you turn the Bluetooth radio on. See *Bonding with Discovered Device(s)* on page 7-34 for more information.

To find Bluetooth devices in the area:

1. Ensure that Bluetooth is enabled on both devices.
2. Ensure that the Bluetooth device to discover is in discoverable and connectable modes.
3. Ensure that the require profile is enabled on the MC9500-K. See *Profiles Tab* on page 7-47 for more information.
4. Ensure that the two devices are within 30 feet (10 meters) of one another.
5. Tap the Bluetooth icon and select **Show BTExplorer**. The BTExplorer window appears.

   ✓ **NOTE** If favorite connections have already been created, the Favorites screen displays. If no favorite connections have been created, the New Connection Wizard screen displays.

6. Tap **Menu > New Connection**. The **New Connection Wizard** appears.

   ![Figure 7-17  BTExplorer Window](image)

7. Select **Explore Services on Remote Device** or another from the drop-down list and tap **Next**.

   The following actions are available in the drop-down list (actions may vary depending upon configurations):
   - Explore Services on Remote Device
   - Pair with a Remote Device
   - Active Sync via Bluetooth
   - Browse Files on Remote Device
   - Connect to Headset
   - Connect to Internet using Access Point
   - Connect to Internet using Phone/Modem
   - Connect to Personal Area Network
   - Connect to Printer
   - Send or Exchange Objects
   - Associate Serial Port
   - Connect to High-Quality Audio.

   ✓ **NOTE** If a device discovery action has not been previously performed, a device discovery is automatically initiated. If a device discovery has previously been performed, the device discovery process is skipped, and the previously found list of devices displays. To start a new device discovery, tap and hold in the window and select **Discover Devices** from the pop-up menu.

8. **BTExplorer** searches for Bluetooth devices in the area.
The discovered devices display in the **Select Remote Device** window.

9. Select a device from the list and tap **Next**. The MC9500-K searches for services on the selected Bluetooth device.

**NOTE** If the MC9500-K discovers a service but the service is not supported, the service icon is grayed-out.
10. Select a service from the list and press **Next**. The **Connection Favorite Options** window appears.

![Figure 7-21 Connection Favorite Options Window](image)

11. In the **Favorite Name** text box, enter a name for this service that will appear in the **Favorite** window.

12. Tap **Next**. The **Connection Summary** window appears.

13. Tap **Connect** to add the service to the **Favorite** window and connect to the service.

![Figure 7-22 Favorites Window](image)

### Available Services

**NOTE** Some devices might not require a PIN. This depends upon the device’s authentication.

The MC9500-K offers the following services:

- File Transfer Services
- Dial-Up Networking Services
- OBEX Object Push Services
- Headset Audio Gateway Services
- Hands-Free Audio Gateway Services
- Serial Port Services
- Personal Area Networking Services
- IrMC Services
- A2DP/AVRCP.

See the following sections for information on these services.

**File Transfer Services**

✓ **NOTE** Shared folders are a security risk.

To transfer files between the MC9500-K and another Bluetooth enabled device:

1. Ensure that OBEX File Transfer profile is enabled on the MC9500-K. See Profiles Tab on page 7-47 for more information.

   ✓ **NOTE** If favorite connections have already been created, the Favorites screen displays. If no favorite connections have been created, the New Connection Wizard screen displays.

2. Use the Connection Wizard to search for a Bluetooth device.

3. Select the device and tap Next. The Select Remote Service window appears.

4. Tap Next. The Connection Favorite Options window appears.

5. Tap Next. The Connection Summary window appears.

6. Tap Connect. The remote device's accessible folders appear.

![File Transfer Window](image)

**Figure 7-23** File Transfer Window

7. Double-tap the file to copy. The Save Remote File window appears.
8. Tap and hold on the file. A pop-up menu appears.

9. Select the action to perform:
   - **New** - create a new file or folder on the remote device
   - **Delete** - delete the selected file on the remote device.
   - **Get File** - copy the file from the remote device to the MC9500-K.
   - **Put File** - copy a file from the MC9500-K to the remote device.

**Creating a New File or Folder**

To create a new folder or file on the remote device:

1. Tap and hold on the screen and select **New > Folder** or **New > File**. The Create New Folder or Create New File window appears.

2. Enter the name for the new folder or file.

3. Tap **OK** to create the new folder or file on the remote device.

**Deleting a File**

To delete a file from the remote device:

1. Tap and hold on the file to delete and select **Delete**.

2. In the Delete Remote Device File dialog box tap **Yes**.

**Getting a File**

To copy a file from a remote device:

1. Double-tap or tap and hold on the file and select **Get**. The Save Remote File window appears.

2. Navigate to the directory to save the file.

3. Tap **Save**. The file is transferred from the remote device to the MC9500-K.

**Copying a File**

To copy a file to a remote device:
2. Navigate to the directory to save the file and select a file.
3. Tap Open. The file copies from the MC9500-K to the remote device.

Connecting to the Internet Using an Access Point
This section explains how to access a Bluetooth-enabled LAN access point (AP) for a network connection. Use Internet Explorer to connect to a server.

1. Ensure the MC9500-K is discoverable and connectable. See Device Info Tab on page 7-36.
2. Ensure that the Personal Area Networking profile is enabled on the MC9500-K. See Profiles Tab on page 7-47 for more information.
3. Use the Connection Wizard to search for a Bluetooth AP.

   **NOTE** If favorite connections have already been created, the Favorites screen displays. If no favorite connections have been created, the New Connection Wizard screen displays.

4. Select the Personal Area Network or Network Access service and select Connect from the pop-up menu. The MC9500-K connects with the access point.
5. Tap Start > Internet Explorer. The Internet Explorer window appears.
6. In the address field, enter an internet address and tap the Enter button. The web page loads.

   **NOTE** Network Access profile is not supported.

Dial-Up Networking Services
Dial-up networking allows the user to connect a PC or laptop to the MC9500-K and use the MC9500-K as a modem to connect to an office network or ISP.

Before setting up dial-up networking, obtain dial-up information and other necessary settings (username, password and domain name, if required) for the office network or ISP. To create a new Bluetooth connection:

1. Ensure the MC9500-K is discoverable and connectable. See Device Info Tab on page 7-36.
2. Ensure that the Dial-Up Networking profile is enabled on the MC9500-K. See Profiles Tab on page 7-47 for more information.
3. Tap **Menu > Settings > Services** tab.
4. Tap **Add** button.
5. Select **Dial-up networking Service**.
6. Tap **OK**. The **Edit Local Services** window appears.

![Edit Local Service Window](image)

**Figure 7-25**  *Edit Local Service Window*

7. In the **Local COM Port** drop-down list, select **DUN1** for GSM configurations or **WMP9** for CDMA configurations.
8. Tap **OK** twice.
9. On the PC or laptop, set up Bluetooth according to the manufacturer’s instructions.
10. On the PC or laptop Bluetooth software, search for the MC9500-K and select the Dial-up Networking service.
11. Using dial-up software on the PC or laptop, connect to the MC9500-K.
12. The MC9500-K phone function dials the ISP number and connects to the ISP.
13. To verify, on the PC or laptop, launch Internet Explorer and open a web site.

**Object Exchange Push Services**

Object Exchange (OBEX) is a set of protocols that allows sharing objects such as Contacts or pictures using Bluetooth.

To exchange contact information with another Bluetooth enabled device:

1. Ensure the MC9500-K is discoverable and connectable. See *Device Info Tab on page 7-36*.
2. Ensure that the **OBEX Object Push** profile is enabled on the MC9500-K. See *Profiles Tab on page 7-47* for more information.

**NOTE** If favorite connections have already been created, the **Favorites** screen displays. If no favorite connections have been created, the **New Connection Wizard** screen displays.

3. Use the **Connection Wizard** to search for a Bluetooth device.
4. Select the device and tap **Next**.
5. Select the **OBEX Object Push** service and select **Connect**. The **OBEX Object Push** window appears.
6. In the **Action** drop-down list, select one of the following options: **Send Contact Information**, **Swap Contact Information**, **Fetch Contact Information**, or **Send a Picture**.

**Sending a Contact**

To send a contact to another device:

✓ **NOTE** Prior to sending and receiving contacts, a default contact must be set up before attempting to send a contact.

1. Tap and hold on **OBEX Object Push** and select **Connect**. The **OBEX Object Push** window appears.

![OBEX Object Push Window](image)

Figure 7-26 **OBEX Object Push Window**

2. In the **Action**: drop-down list, select **Send Contact Information**.

3. Tap . The **Select Contact Entry** window appears.

![Select Contact Entry Window](image)

Figure 7-27 **Select Contact Entry Window**

4. Select a contact to send to the other device.

5. Tap **OK**.

6. Tap **OK** to send the contact to the other device and display a confirmation dialog box on the other device to accept the contact. A **Send Contact** dialog appears.

7. Tap **Ok**.
Swapping Contacts

To swap contacts with another device:

✔️ **NOTE** Prior to swapping contacts, a default contact must be set up before attempting to send a contact. Ensure that the MC9500-K is connectable.

1. Tap and hold on **OBEX Object Push** and select **Connect**. The **OBEX Object Push** window appears.

   ![OBEX Object Push Window](image)
   
   **Figure 7-28** OBEX Object Push Window

2. In the **Action:** drop-down list, select **Swap Contact Information**.

3. Tap . The **Select Contact Entry** window appears.

   ![Select Contact Entry Window](image)
   
   **Figure 7-29** Select Contact Entry Window

4. Select a contact to send to the other device.

5. Tap **OK**.

6. Tap **OK** to swap contacts with the other device and display a confirmation dialog box on the other device to accept the contact.

7. Tap **Ok**.
Fetching a Contact

To fetch a contact from another device:

1. Tap and hold on **OBEX Object Push** and select **Connect**. The **OBEX Object Push** window appears.

   ![OBEX Object Push Window](image)

   **Figure 7-30 OBEX Object Push Window**

2. In the **Action**: drop-down list, select **Fetch Contact information**.

3. Tap **OK**. The contact on the other device is copied.

Sending a Picture

To send a picture to another device:

1. Tap and hold on **OBEX Object Push** and select **Connect**. The **OBEX Object Push** window appears.

   ![OBEX Object Push Window](image)

   **Figure 7-31 OBEX Object Push Window**

2. In the **Action**: drop-down list, select **Send A Picture**.

3. Tap . The **Send Local Picture** window appears.

**NOTE** Prior to sending and receiving contacts, a default contact must be set up before attempting to send a contact. Ensure that the MC9500-K is connectable.
4. Navigate to the picture to send to the other device.

5. Tap Open.

6. Tap OK to send the picture to the other device and display a confirmation dialog box on the other device to accept the picture. A Send Picture dialog appears.

7. Tap Ok.

**Headset Services**

To connect to a Bluetooth headset:

- **NOTE** Newer Bluetooth headsets are device dependant and remember the last device they connected to. If problems occur while connecting to the headset, place the headset in discovery mode. Refer to the headset user manual for more information.

- **NOTE** The headset tries to initiates the connection. If a connection is not established, then the Headset service is not enabled.

1. Ensure the MC9500-K is connectable (required when automatic re-connect is initiated). See *Device Info Tab on page 7-36*.

2. Ensure that the **Headset** Audio Gateway service is enabled on the MC9500-K (required when automatic re-connect is initiated). See *Services Tab on page 7-37* for more information.

3. Use the **Connection Wizard** to search for a Bluetooth headset.

4. Select the device and tap **Next**.

5. Select the **Headset** service name and select **Connect**. The MC9500-K connects to the headset. Refer to the headset user manual for instructions on communicating with a Bluetooth device.

- **NOTE** When using a Bluetooth headset with Headset Services, you cannot accept or end a call from the headset. You must accept or end a call on the MC9500-K.

6. Press the communication button on the headset. This routes both system and WAN call audio to the headset.

7. When a call is received on the MC9500-K, tap the **Accept** button to answer the call.

8. Press the communication button on the headset to route the audio back to the MC9500-K.
Hands-free Services

To connect to a Bluetooth headset:

1. Ensure the MC9500-K is connectable (required when automatic re-connect is initiated). See Device Info Tab on page 7-36.

2. Ensure that the Hands Free profile is enabled on the MC9500-K. See Profiles Tab on page 7-47 for more information.

3. Use the Connection Wizard to search for a Bluetooth hands-free headset.

4. Select the hand-free device and tap Next.

5. Select the Hands-free service name and select Connect. The MC9500-K connects to the headset. Refer to the headset user manual for instructions on communicating with a Bluetooth device.

6. During an active connection, the MC9500-K cannot go into suspend mode when the Power Button is pressed. A message appears notifying the user.

   Once the WAN call is disconnected (with Hands-free profile) the Power button is enabled.

   ![Headset icon]

Figure 7-33  WWAN Bluetooth Audio Notification Dialog Box

Serial Port Services

Use the wireless Bluetooth serial port connection as you would a physical serial cable connection. Configure the application that will use the connection to the correct serial port.

To establish a serial port connection:

1. Use the Connection Wizard to search for a Bluetooth serial device.

2. Select the device and tap Next. The Connection Favorite Options window appears.
3. In the **Local COM Port**: drop-down list select a COM port.

4. Tap **Finish**.

**ActiveSync Using Serial Port Services**

**NOTE** By default, COM ports COM5, COM9, COM11, COM21, COM22 and COM23 are Bluetooth virtual ports. If an application opens one of these ports, the Bluetooth driver activates and guides you through a Bluetooth connection.

Use the wireless Bluetooth serial port connection for ActiveSync just as you would a physical serial cable connection. You must configure the application that will use the connection to the correct serial port.

![ActiveSync Connection Settings Window on PC](image)

**Figure 7-34** ActiveSync Connection Settings Window on PC

To establish an ActiveSync connection:

1. Ensure that the **Sync** profile is enabled on the MC9500-K. See *Profiles Tab on page 7-47* for more information.

2. Use the **Connection Wizard** to search for a Bluetooth device, such as a PC. In the drop-down list select **ActiveSync via Bluetooth**.

3. Select the device and tap **Next**. The **Connection Favorite Options** window appears.

4. Tap **Connect**. The **Remote Service Connection** window appears.

![Remote Service Connection Window](image)

**Figure 7-35** Remote Service Connection Window

5. In the **Service Type** drop-down list, select **Active Sync**.
6. Tap OK. The MC9500-K connects the PC and an ActiveSync session begins.
7. Tap Finish. The Connection Favorite Options window appears.
8. To end the session, tap the ActiveSync icon in the Favorite window and select Disconnect from the pop-up window.

**Personal Area Network Services**

NOTE  This profile supports Ad-hoc and PAN User. Network Access Profile is not supported.

Connect two or more Bluetooth devices to share files, collaborate, or play multi-player games. To establish a Personal Area Network connection:

1. Ensure that the **Personal Area Networking** profile is enabled on the MC9500-K. See *Profiles Tab on page 7-47* for more information.
2. Use the **Connection Wizard** to search for a Bluetooth device.
3. Select the device and tap Next. The **Connection Favorite Options** window appears.
4. Tap Next. The **Connection Summary** window appears.
5. Tap Connect. The MC9500-K connects to the Bluetooth device.

**IrMC Synchronization Services**

IrMC Synchronization is used to synchronize PIM contacts between a remote device and the MC9500-K. To establish an IrMC synchronization:

1. Ensure the MC9500-K is connectable (required when automatic re-connect is initiated). See *Device Info Tab on page 7-36*.
2. Ensure that the **Sync** profile is enabled on the MC9500-K. See *Profiles Tab on page 7-47* for more information.
3. Tap Menu > Settings > Services tab.
4. Tap Add button.
5. Select **IrMC Synchronization**.
6. Tap OK. The **Edit Local Services** window appears.
7. Tap OK twice.
8. Use the **Connection Wizard** to search for a Bluetooth device, such as a Car Kit.
9. Select the device and tap Next. The **Connection Favorite Options** window appears.
10. Tap and hold **IrMA Synchronization** and select Connect in the pop-up menu.

NOTE  To automatically transfer contact with a Car Kit, ensure that the IrMC Synchronization service is enabled on the MC9500-K.

**A2DP/AVRCP Services**

A2DP/AVRCP is used to connect to a high-quality stereo headset:
1. Ensure the MC9500-K is connectable (required when automatic re-connect is initiated). See Device Info Tab on page 7-36.

2. Ensure that the remote Bluetooth device is in discoverable mode. See the devices user manual for instructions.

3. Ensure that the A2DP/AVRCP profile is enabled on the MC9500-K. See Profiles Tab on page 7-47 for more information.

4. Tap Menu > Settings > Services tab.

5. Tap Add button.

7. Tap OK. The Edit Local Services window appears.

8. Tap OK twice.

10. Select Connect to High-Quality Audio from the drop-down list.

11. Tap Next.

12. Select the device and tap Next.

13. Enter the PIN Code for the remote device and then tap OK. The Connection Favorite Options window appears.

14. Tap Next.

15. Tap Connect. The MC9500-K connects to the high-quality audio headset.

For stereo headsets that can use hands-free services, connect to the hands-free service after connecting to the A2DP service:

1. Tap Menu > New Connection.

2. Select Connect to Headset from the drop-down list.

3. Tap Next.

4. Select the stereo headset and tap Next.

5. Select the Hands-Free unit service and then tap Next.

6. Tap Next.

7. Tap Connect.

Connect to a HID Device

The MC9500-K can connect to an Human Interface Device (HID) device such as a Bluetooth keyboard:

1. Ensure the MC9500-K is connectable (required when automatic re-connect is initiated). See Device Info Tab on page 7-36.

2. Ensure that the remote Bluetooth device is in discoverable mode. See the device user manual for instructions.

3. Ensure that the HID Client profile is enabled on the MC9500-K. See Profiles Tab on page 7-47 for more information.
4. Tap Menu > New Connection.
5. Select Explore Services on Remote Device from the drop-down list.
6. Tap Next.
7. Select the device and tap Next.
8. Select the service and tap Next.
9. The Connection Favorite Options window appears.
10. Tap Next.
11. Tap Connect. The MC9500-K connects to the HID device.

**Bonding with Discovered Device(s)**

A bond is a relationship created between the MC9500-K and another Bluetooth device in order to exchange information in a secure manner. Creating a bond involves entering the same PIN on the two devices. After creating a bond and turning on the Bluetooth radios, the devices recognize the bond and can exchange information without re-entering a PIN.

To bond with a discovered Bluetooth device:

1. Tap the Bluetooth icon and select Show BTExplorer. The BTExplorer window appears.
3. In the drop-down list, select Pair with Remote Device.
4. Tap Next. The Select Remote Device window appears.

**NOTE** Devices discovered previously are listed to save time. To start a new device discovery, tap and hold on the list area and select Discover Devices from the pop-up menu.

![Screen shot of the Select Remote Device window.](image)

**Figure 7-36 Select Remote Device Window**

5. Select a device from the list and tap Next. The PIN Code Request window appears.
6. In the PIN Code field, enter the PIN code.

7. Tap OK. The Pairing Status window displays.

8. Tap Finish. The devices are successfully paired. The device name moves to the Trusted Devices window.

**Deleting a Bonded Device**

To delete a device no longer needed:

1. Tap the Bluetooth icon and select Show BTExplorer. The BTExplorer window appears.

2. Tap Menu > Trusted Devices. The Trusted Devices window appears.

3. Tap and hold on the device select Delete Link Key in the pop-up menu.

4. A confirmation dialog appears. Tap Yes.

**Accepting a Bond**

When a remote device wants to bond with the MC9500-K, enter a PIN when requested to grant permission.

1. Ensure that the MC9500-K is set to discoverable and connectable. See Bluetooth Settings on page 7-36. When prompted to bond with the remote device the PIN Code Request window appears.
In the **PIN Code** text box, enter the same PIN entered on the device requesting the bond. The PIN must be between 1 and 16 characters.

3. In the **Device Name** text box, edit the name of the device requesting the bond, if desired.

4. Tap **OK** to create the bond. The MC9500-K can now exchange information with the other device.

### Bluetooth Settings

Use the **BTExplorer Settings** window to configure the operation of the **BTExplorer** application. Tap **Menu > Settings**. The **BTExplorer Settings** window appears.

#### Device Info Tab

Use the **Device Info** tab to configure the MC9500-K’s Bluetooth connection modes.

</tbody>
</table>
Services Tab

NOTE: Ensure that the MC9500-K is discoverable and connectable when remote devices use MC9500-K services.

Use the Services tab to add or delete Bluetooth services.

To add a service:

1. Tap Add. The Add Local Service window displays.

2. In the list, select a service to add.

3. Tap OK. The Edit Local Service window displays for the selected service.

4. Select the appropriate information and then tap OK. See the following sections for information on the available services.

Dial-Up Networking Service

Dial-up Networking allows other Bluetooth devices to access a dial-up modem.

Single Bay USB Cradle

This section describes how to use a Single Bay USB cradle with the MC9500-K. For power and USB communication setup procedures refer to the MC9500-K Series Mobile Computer Integrator Guide.

The Single Bay USB Cradle:

- Provides 5.4 VDC power for operating the MC9500-K.
- Synchronizes information between the MC9500-K and a host computer. Refer to the MC9500-K Mobile Computer Integrator Guide for information on setting up a partnership between the MC9500-K and a host computer.
- Charges the MC9500-K’s battery.

Communication and Charging the MC9500-K Battery

To charge the MC9500-K battery and to communicate with a host computer:

1. Ensure that the cradle is connected to power and to a host computer.
2. Align and hook the MC9500-K interface pocket onto the cradle’s cleat.

Figure 8-1  Hooking the MC9500-K onto the Single Bay USB Cradle
The MC9500-K's Battery Status LED indicates the status of the battery charging in the MC9500-K. See Table 2-6 on page 2-7 for charging status indications. The 4800 mAh battery fully charges in less than six hours.
Single Slot Battery Charger

This section describes how to use a Single Slot Battery Charger.

Charging the Battery

To charge a spare battery:

1. Ensure that the charger is connected to power.
2. Insert the spare battery into the slot to begin charging.

The charging status is indicated on the front of the battery. See Table 2-7 on page 2-8 for charging status indications. The 4800 mAh battery fully charges in less than six hours.
Four Bay Charge Only Cradle

This section describes how to use a Four Bay Charge Only cradle with the MC9500-K.

The Four Bay Charge Only cradle:

- Provides 5.4 VDC power for operating the MC9500-K.
- Simultaneously charges up to four MC9500-K devices.
- Mounts on a wall or desktop using the appropriate mounting bracket.

Charging

To charge the MC9500-K:

1. Ensure that the cradle is connected to power.

2. Align and hook the MC9500-K interface pocket onto the cradle’s cleat. Optional guide cups can be used to assist in placement of the MC9500-K onto the cradle.

Figure 8-4  Hooking the MC9500-K onto a Four Slot Cradle
The MC9500-K’s Battery Status LED shows the status of the battery charging in the MC9500-K. See Table 1-1 on page 1-7 for charging status indications. The 4800 mAh battery fully charges in less than six hours.
Four Bay Ethernet Cradle

This section describes how to use a Four Bay Ethernet cradle with the MC9500-K. For setup and cradle communication setup procedures refer to the MC9500-K Mobile Computer Integrator Guide.

The Four Bay Ethernet cradle:

- Provides 5.4 VDC power for operating the MC9500-K.
- Connects up to four MC9500-K devices to an Ethernet network.
- Simultaneously charges up to four MC9500-K devices.
- Mounts on a wall or desktop using the appropriate mounting bracket.

Communication and Charging

To charge the MC9500-K battery and communicate with a host computer:

1. Ensure that the cradle is connected to power and an Ethernet hub.
2. Align and hook the MC9500-K interface pocket onto the cradle’s cleat. If available, use the guide to assist in placement of the MC9500-K onto the cradle. See Figure 8-4 on page 8-7.

![Four Bay Ethernet Cradle with Optional Guide Cups](image)

The MC9500-K’s Battery Status LED shows the status of the battery charging in the MC9500-K. See Table 1-1 on page 1-7 for charging status indications. The 4800 mAh battery fully charges in less than six hours.
LED Indicators

**Speed LED**

The cradle’s green Speed LED lights to indicate that the transfer rate is 100 Mbps. When it is not lit it indicates that the transfer rate is 10 Mbps.

**Link LED**

The cradle’s yellow Link LED blinks to indicate activity, or stays lit to indicate that a link is established. When it is not lit it indicates there is no link.

![Four Slot Ethernet Cradle LED Indications](image)
Four Slot Battery Charger

This section describes how to use the Four Slot Battery Charger.

The Four Slot Battery Charger:

- Simultaneously charges up to four MC9500-K batteries.
- Mounts on a wall or desk using the appropriate mounting bracket.

Battery Charging

To charge a battery:

1. Ensure that the charger is connected to power.
2. Insert a battery into a battery charging slot and gently press the battery into the slot to ensure proper contact.

![Four Slot Battery Charger](image)

*Figure 8-8  Four Slot Battery Charger*

The charging status is indicated on the front of the battery. See *Table 2-7 on page 2-8* for charging status indications. The 4800 mAh battery fully charges in less than six hours.
Vehicle Cradle

This section describes how to use a vehicle cradle with the MC9500-K. For cradle installation and communication setup procedures refer to the VCD9500 Vehicle Cradle Quick Reference Guide.

Once installed in a vehicle, the cradle:

• holds the MC9500-K securely in place
• provides power for operating the MC9500-K
• re-charges the battery in the MC9500-K.

Charging the MC9500-K Battery

Insert the MC9500-K into the vehicle cradle with the display facing out.

Push back the level forward to lock the MC9500-K into place. The MC9500-K automatically begins charging.

NOTE The MC9500-K will not begin charging unless the side level is locked into place.

![Vehicle Cradle](image)

Figure 8-9 Vehicle Cradle

CAUTION Ensure the MC9500-K is fully inserted in the cradle. Lack of proper insertion may result in property damage or personal injury. Motorola is not responsible for any loss resulting from the use of the products while driving.

To remove the MC9500-K, push the side levers toward the back of the Vehicle cradle. Lift the MC9500-K out of the cradle.

The MC9500-K’s Battery Status LED indicates the status of the battery charging in the MC9500-K. See Table 1-1 on page 1-7 for charging status indications. The 4800 mAh battery fully charges in less than six hours.
Vehicle Battery Charger

This section describes how to use the Vehicle Battery Charger.

Charging the Battery

To charge a spare battery:

1. Ensure that the charger is connected to power.
2. Insert the spare battery into the slot to begin charging.

![Release Button]

The charging status is indicated on the front of the battery. See Table 2-7 on page 2-8 for charging status indications. The 4800 mAh battery fully charges in less than six hours.

To remove the battery, press the release button. The battery ejects from the charger.
**Magnetic Stripe Reader**

This section describes how to set up and use the snap-on (Magnetic Stripe Reader (MSR) with the MC9500-K. The MSR snaps on to the back of the MC9500-K and removes easily when not in use.

When attached to the MC9500-K, the MSR allows the MC9500-K to capture data from magnetic stripe cards. To download sample MSR data capture software, visit the Support Central web site.

To charge to MC9500-K with the MSR attached,

![Release Button](image)

---

**NOTE**

While the MC9500-K with MSR is attached to a Single Bay USB Cradle, a Four Bay Ethernet Cradle or a USB/Charging Cable, Operation of the MSR is disabled.

If attaching the MC9500-K with the MSR onto a Four Bay Cradle, remove the optional guide cup before attaching the MC9500-K.

**Attaching and Removing the MSR**

To attach, slide the cleat of the MSR into the interface pocket of the MC9500-K and snap into place.

To remove the MSR, press the release button and lift off the MC9500-K.

**Using the MSR**

Install an MSR enabled application onto the MC9500-K.

To use the MSR:

1. Attach the MSR to the MC9500-K.
2. Power on the MC9500-K.
3. Launch the MSR application.
4. Swipe the magnetic stripe card through the MSR, with the magnetic stripe on the card facing away from the MC9500-K. Swipe the card in either direction, up and down or down and up. For best results, gently press the card against the back of the MSR while swiping to ensure contact with the reader.

![Figure 8-12 Swipe Card through MSR](image)

5. The application indicates if the data has been read correctly.
Cables

This section describes how to set up and use the cables. The cables are available with a variety of connection capabilities.

The following communication/charge cables are available:

- USB/Charge cable
  - Provide the MC9500-K with operating and charging power when used with the Motorola approved power supply.
  - Synchronize information between the MC9500-K and a host computer. With customized or third party software, it can also synchronize the MC9500-K with corporate databases.

![USB/Charge Cable](image)

**Figure 8-13**  USB/Charge Cable

- Charge Only cable
  - Provide the MC9500-K with operating and charging power when used with the Motorola approved power supply.

- Single Bay Cradle/Charger Y Cable
  - Provide the power to a Single Bay USB Cradle and Single Slot Battery Charger or two Single Slot Battery Chargers off one power supply when used with the Motorola approved power supply.

![Single Slot Cradle/Charger Y-Cable](image)

**Figure 8-14**  Single Slot Cradle/Charger Y-Cable

- Auto Charge cable.
  - Provides the MC9500-K or Vehicle Battery Charger with operating and charging power tough a cigarette lighter.
Battery Charging and Operating Power

The communication/charge cables can charge the MC9500-K battery and supply operating power.

To charge the MC9500-K battery:

1. Connect the cable power input connector to the Motorola approved power source.

2. Align the cleat on the cable with the interface pocket on the back of the MC9500-K.

   The MC9500-K amber Battery Status LED indicates the MC9500-K battery charging status. The 4800 mAh battery charges in less than six hours. See Table 1-1 on page 1-7 for charging status indications.

3. When charging is complete, press the release button up and remove the cable from the MC9500-K.
Chapter 9 Maintenance & Troubleshooting

Introduction

This chapter includes instructions on cleaning and storing the MC9500-K, and provides troubleshooting solutions for potential problems during MC9500-K operation.

Maintaining the MC9500-K

For trouble-free service, observe the following tips when using the MC9500-K:

- Do not scratch the screen of the MC9500-K. When working with the MC9500-K, use the supplied stylus or plastic-tipped pens intended for use with a touch-sensitive screen. Never use an actual pen or pencil or other sharp object on the surface of the MC9500-K screen.
  
  Motorola recommends using a screen protector, p/n KT-122010-01R.

- The touch-sensitive screen of the MC9500-K is polycarbonate. Do not drop the MC9500-K or subject it to strong impact.

- Protect the MC9500-K from temperature extremes. Do not leave it on the dashboard of a car on a hot day, and keep it away from heat sources.

- Do not store the MC9500-K in any location that is dusty, damp or wet.

- Use a soft lens cloth to clean the MC9500-K. If the surface of the MC9500-K screen becomes soiled, clean it with a soft cloth moistened with a diluted window-cleaning solution.

- Periodically replace the rechargeable battery to ensure maximum battery life and product performance. Battery life depends on individual usage patterns. The battery provides health status to assist in determining useful battery life. See Chapter 2, Battery Management for more information.

- Do not scratch the exit window. Clean the window periodically. Dust, contamination, and scratches on the exit window can cause visible blemishes in the images captured with the Imager.
A screen protector is applied to the MC9500-K. Motorola recommends using this to minimize wear and tear. Screen protectors enhance the usability and durability of touch screen displays. Benefits include:
- Protection from scratches and gouges
- Durable writing and touch surface with tactile feel
- Abrasion and chemical resistance
- Glare reduction
- Keeping the device’s screen looking new
- Quick and easy installation.

Removing the Screen Protector

A screen protector is applied to the MC9500-K. Motorola recommends using this to minimize wear and tear. Screen protectors enhance the usability and durability of touch screen displays.

To remove the screen protector, lift the corner using a thin plastic card, such as a credit card, then carefully lift it off the display.

![Removing the Screen Protector](image)

**CAUTION**  Do not use a sharp object to remove the protector. Doing so can damage the display.

**NOTE**  Not using a screen protector can affect warranty coverage. To purchase replacement protectors, contact your local account manager or Motorola, Inc. These include screen protector installation instructions. Part number: KT-122010-01R Screen Protector 3/pk.

Battery Safety Guidelines

- The area in which the units are charged should be clear of debris and combustible materials or chemicals. Particular care should be taken where the device is charged in a non commercial environment.
- Follow battery usage, storage, and charging guidelines found in the user’s guide.
- Improper battery use may result in a fire, explosion, or other hazard.
To charge the mobile device battery, the battery and charger temperatures must be between +32 °F and +104 °F (0 °C and +40 °C).

Do not use incompatible batteries and chargers. Use of an incompatible battery or charger may present a risk of fire, explosion, leakage, or other hazard. If you have any questions about the compatibility of a battery or a charger, contact Motorola Enterprise Mobility support.

For devices that utilize a USB port as a charging source, the device shall only be connected to products that bear the USB-IF logo or have completed the USB-IF compliance program.

To enable authentication of an approved battery, as required by IEEE1725 clause 10.2.1, all batteries will carry a Motorola hologram. Do not fit any battery without checking it has the Motorola authentication hologram.

Do not disassemble or open, crush, bend or deform, puncture, or shred.

Severe impact from dropping any battery-operated device on a hard surface could cause the battery to overheat.

Do not short circuit a battery or allow metallic or conductive objects to contact the battery terminals.

Do not modify or remanufacture, attempt to insert foreign objects into the battery, immerse or expose to water or other liquids, or expose to fire, explosion, or other hazard.

Do not leave or store the equipment in or near areas that might get very hot, such as in a parked vehicle or near a radiator or other heat source. Do not place battery into a microwave oven or dryer.

Battery usage by children should be supervised.

Please follow local regulations to properly dispose of used re-chargeable batteries.

Do not dispose of batteries in fire.

In the event of a battery leak, do not allow the liquid to come in contact with the skin or eyes. If contact has been made, wash the affected area with large amounts of water and seek medical advice.

If you suspect damage to your equipment or battery, contact Motorola Enterprise Mobility support to arrange for inspection.

---

**Cleaning**

**CAUTION** Always wear eye protection.

Read warning label on compressed air and alcohol product before using.

If you have to use any other solution for medical reasons please contact Motorola for more information.

**WARNING!** Avoid exposing this product to contact with hot oil or other flammable liquids. If such exposure occurs, unplug the device and clean the product immediately in accordance with these guidelines.

**Materials Required**

- Alcohol wipes
- Lens tissue
- Cotton tipped applicators
• Isopropyl alcohol
• Can of compressed air with a tube.

Cleaning the MC9500-K

Housing
Using the alcohol wipes, wipe the housing including keys and in-between keys.

Display
The display can be wiped down with the alcohol wipes, but care should be taken not to allow any pooling of liquid around the edges of the display. Immediately dry the display with a soft, non-abrasive cloth to prevent streaking.

Scanner Exit Window
Wipe the scanner exit window periodically with a lens tissue or other material suitable for cleaning optical material such as eyeglasses.

Interface Connector
1. Remove the battery from MC9500-K. See Replacing the Battery on page 1-8.
2. Dip the cotton portion of the cotton tipped applicator in isopropyl alcohol.
3. Rub the cotton portion of the cotton tipped applicator back-and-forth across the interface connector on the back of the MC9500-K. Do not leave any cotton residue on the connector.
4. Repeat at least three times.
5. Use the cotton tipped applicator dipped in alcohol to remove any grease and dirt near the connector area.
6. Use a dry cotton tipped applicator and repeat steps 3 through 5.
7. Spray compressed air on the connector area by pointing the tube/nozzle about ½ inch away from the surface.
   **CAUTION:** Do not point nozzle at yourself and others, ensure the nozzle or tube is away from your face.
8. Inspect the area for any grease or dirt, repeat if required.
9. Replace the battery.

Battery Contacts
1. Remove the battery from MC9500-K. See Replacing the Battery on page 1-8.
2. Dip the cotton portion of the cotton tipped applicator in isopropyl alcohol.
3. Rub the cotton portion of the cotton tipped applicator back-and-forth across the battery contacts on the back of the battery. Do not leave any cotton residue on the contacts.
4. Repeat at least three times.
5. Use the cotton tipped applicator dipped in alcohol to remove any grease and dirt near the contact area.
6. Use a dry cotton tipped applicator and repeat steps 3 through 5.
7. Spray compressed air on the contact area by pointing the tube/nozzle about ½ inch away from the surface.
   **CAUTION:** Do not point nozzle at yourself and others, ensure the nozzle or tube is away from your face.
8. Inspect the area for any grease or dirt, repeat if required.
9. Replace the battery in the MC9500-K.

Cleaning Cradle Connectors

To clean the connectors on a cradle:

1. Remove the DC power cable from the cradle.
2. Dip the cotton portion of the cotton tipped applicator in isopropyl alcohol.
3. Rub the cotton portion of the cotton tipped applicator along the pins of the connector(s). Slowly move the applicator back-and-forth from one side of the connector to the other. Do not let any cotton residue on the connector.
4. All sides of the connector should also be rubbed with the cotton tipped applicator.
5. Spray compressed air in the connector area by pointing the tube/nozzle about ½ inch away from the surface. CAUTION: do not point nozzle at yourself and others, ensure the nozzle or tube is pointed away from your face.
6. Ensure that there is no lint left by the cotton tipped applicator, remove lint if found.
7. If grease and other dirt can be found on other areas of the cradle, use lint free cloth and alcohol to remove.
8. Allow at least 10 to 30 minutes (depending on ambient temperature and humidity) for the alcohol to air dry before applying power to cradle.
   If the temperature is low and humidity is high, longer drying time is required. Warm temperature and dry humidity requires less drying time.

Cleaning Frequency

The cleaning frequency is up to the customer’s discretion due to the varied environments in which the mobile devices are used. They may be cleaned as frequently as required. However when used in dirty environments it may be advisable to periodically clean the scanner exit window to ensure optimum scanning performance.
# Troubleshooting

## MC9500-K

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
### Technical Specifications

#### WLAN Security
- TKIP, AES, WPA (Personal or Enterprise), WPA2 (Personal or Enterprise), 802.1x, EAP-TLS, TTLS (CHAP, MS-CHAP, MS-CHAPv2, PAP or MD5), PEAP (TLS, MSCHAPv2, EAP-GTC), LEAP, EAP-FAST (TLS, MS-CHAPv2, EAP-GTC), CCXv4 certified, support for IPv6, FIPS140-2 certified

#### Spreading Technique
- Direct Sequence Spread Spectrum (DSSS) and Orthogonal Frequency Division Multiplexing (OFDM)

#### Antenna
- Internal with diversity

#### Voice Communication
- Voice-over-IP ready (with P2P, PBX, PTT clients), Wi-Fi™-certified, IEEE 802.11 a/b/g direct sequence wireless LAN, Wi-Fi Multimedia (WMM), Motorola Voice Quality manager (VQM)

### Wireless PAN Data and Voice Communications

#### Bluetooth
- Class II, v 2.1 with EDR; internal antenna.

#### IrDA
- Infra-red port for connection to printers and other devices.

### Regulatory

#### Electrical Safety
- IEC/UL/CSA/EN 60950-1

#### Environmental
- RoHS-compliant

#### WLAN and Bluetooth (PAN)
- **USA:** FCC Part 15.247, 15.407
- **Canada:** RSS-210
- **EU:** EN 300 328, EN 301 893
- **Japan:** ARIB STD-T33, T66, T70, T71
- **Australia:** AS/NZS 4268s

#### Wireless Wide Area Network
- **Global:** 3GPP TS 51.010, 3GPP TS 34.121, 3GPP TS 34.123, GCF approved module
- **USA:** FCC Part 22, Part 24
- **Canada:** RSS-132, RSS-133
- **EU:** EN 301 511, EN 301 908
- **Australia:** AS/ACIF S 024
- CDMA-EvDO Rev A
- **USA:** FCC Part 22, Part 24
- **Canada:** RSS-129, RSS-133
- HAC compliant

#### RF Exposure
- **USA:** FCC Part 2, FCC OET Bulletin 65 Supplement C
- **Canada:** RSS-102
- **EU:** EN 50360
- **Japan:** ARIB STD T56
- **Australia:** Radio communications Standard 2003
### EMI/RFI
- **USA:** FCC Part 15, Class B
- **Canada:** ICES 003 Class B
- **EU:** EN55022 Class B, EN55024, EN 301 489-1, EN 301 489-7, EN 301 489-17, EN 301 489-19, EN 301 489-24, EN 60601-1-2, EN 50121-3-2, EN 50121-4
- **Australia:** AS/NZS CISPR-22

### Laser Safety
IEC/Class 2/FDA Class II in accordance with IEC60825-1/EN60825-1

### Data Capture Specifications

#### Options
- 1D laser scanner
- 2D imager
- 1D laser scanner and color camera
- 2D imager and color camera

#### Linear 1D Scanner (SE950) Specifications

Appendix B  Voice Quality Manager

Introduction

The Voice Quality Manager (VQM) is a software package that resides on the MC95XX. VQM enables a set of features for Voice over WiFi (VoWiFi) calls, and a sub-set of those features for cellular line calls. The VQM user interface is designed to be intuitive and easy to use, so complex tasks such as enabling the Acoustic Echo Canceller (AEC) while a call is in progress are done with very little or no user intervention.

Features

The VQM software:

- Improves the voice transmission quality without using additional battery power.
- Turns on the AEC for VoWiFi calls automatically, without user intervention.
- Prioritizes the outgoing audio IP packets.
- Provides user-selectable audio modes (speakerphone and handset) with a single tap of the VQM icon. A VQM icon in the title bar of the device indicates the audio mode currently in use.
- NDIS 5.1 compliant.

Enabling VQM

To enable VQM:

1. Tap **Start > Programs > File Explorer.**
2. Navigate to the **Windows** folder.
3. Locate the file **VQMAudioNotify.**
4. Tap the filename to enable VQM.
Audio Modes

The MC95XX can be in any one of the seven different audio modes. The mode is visually indicated by the VQM icon on the title bar.

The VQM icon indicates that the device is in speakerphone mode without Acoustic Echo Cancellation (indicated by the gray VQM icon). The audio modes and their corresponding VQM title bar icons are:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="Speakerphone.png" alt="Icon" /></td>
<td>Speakerphone with Acoustic Echo Cancellation.</td>
</tr>
<tr>
<td><img src="Speakerphone-NoEcho.png" alt="Icon" /></td>
<td>Speakerphone without Acoustic Echo Cancellation.</td>
</tr>
<tr>
<td><img src="Handset-Echo.png" alt="Icon" /></td>
<td>Handset with Acoustic Echo Cancellation (device is in handset mode only while on a call).</td>
</tr>
<tr>
<td><img src="Headset-Call.png" alt="Icon" /></td>
<td>Headset while on a call (Acoustic Echo Cancellation is not enabled for Bluetooth headsets).</td>
</tr>
<tr>
<td><img src="Headset-NoCall.png" alt="Icon" /></td>
<td>Headset while not on a call.</td>
</tr>
<tr>
<td><img src="Bluetooth-Call.png" alt="Icon" /></td>
<td>Bluetooth headset while on a call (Acoustic Echo Cancellation is not enabled for Bluetooth headsets). White icon.</td>
</tr>
<tr>
<td><img src="Bluetooth-NoCall.png" alt="Icon" /></td>
<td>Bluetooth headset while not on a call. Gray icon.</td>
</tr>
</tbody>
</table>

Changing Audio Modes

Depending upon the audio mode being used, the mode can be changed by tapping the VQM icon in the title bar. The audio mode can only be changed only while the user is on a call.
The table below lists the current audio mode and the subsequent audio mode after tapping the VQM icon.

Table B-2  Changing Audio Modes

<table>
<thead>
<tr>
<th>Audio Mode before Tapping VQM Icon</th>
<th>Audio Mode after Tapping VQM Icon</th>
</tr>
</thead>
<tbody>
<tr>
<td>Speakerphone</td>
<td>Handset</td>
</tr>
<tr>
<td>Handset</td>
<td>Speakerphone</td>
</tr>
<tr>
<td>Bluetooth headset</td>
<td>Speakerphone</td>
</tr>
</tbody>
</table>

If the audio mode is set to speakerphone and the user taps the VQM icon, the audio mode changes to handset.

If the user is using a Bluetooth headset, tapping the VQM icon un-pairs the Bluetooth headset from the device causing the audio to be routed to the default mode. In VQM 2.5, there is no way to go back to the Bluetooth headset using the VQM icon if it is un-paired. The only way to reconnect the Bluetooth headset to the device is by using the BTExplorer application.

If the user taps the VQM icon when a wired headset is connected to the mobile device, the audio mode does not change. The audio continues to get routed to the wired headset.

If the user taps the VQM icon while not on a call there is not change to the audio mode.

Tap and hold the VQM icon in the title bar to display a notification dialog box that contains:

- AEC: The Acoustic Echo Canceller status
- DSCP Marked Packets: The number of outbound voice packets that have been recognized and marked as high priority by VQM.
- VQM Version: The VQM version number.

Voice Packet Prioritization

IP soft phones transmit voice packets in the same manner as any other application that sends data over the network. On a network with different types of traffic, voice packets are given the same priority as any other traffic, and therefore may be subject to delays.

WiFi Multi-media (WMM) is a solution to this problem. WMM is a specification that supports prioritizing traffic, and “higher-priority” packets can be given preferential treatment.
To make use of WMM, the devices that generate traffic must mark their packets as high or normal priority in a field in the IP packet called Differentiated Services Code-Point (DSCP). The wireless infrastructure, which must be configured to support WMM, gives a higher priority to packets that have been marked as high priority through DSCP marking by the devices that generate traffic.

VQM detects if there is an ongoing Voice over WiFi (VoWiFi) call, and if so, marks outgoing voice packets (Only outgoing voice packets can be marked. The incoming voice packets have already been through the network, so it makes no sense to mark them.) as high-priority using DSCP. This enables WMM-compatible wireless infrastructure to treat the voice packets preferentially. This results in fewer delays for voice packets, which in turn improves the call quality.

**Limitations**

- There is no VPN support in VQM.
- Only the Avaya softphone is currently supported.

**Acoustic Echo Cancellation**

Acoustic Echo occurs during a voice call when the audio from the earpiece enters the microphone of the same device. This results in the person at the other end hearing back a delayed version of his/her own voice (“Echo”). Needless to say, “Echo” is not desirable, and needs to be suppressed. This is the functionality performed by the Acoustic Echo Canceller (AEC). There are two approaches to suppressing the Echo:

- Turn the Acoustic Echo Canceller (AEC) on permanently. This approach is not very efficient because the device consumes more power when the AEC is on.
- Turn the Acoustic Echo Canceller (AEC) on only when there is an ongoing call.

VQM follows the second of the two approaches mentioned above.

VQM automatically turns on the Acoustic Echo Canceller (AEC) when the mobile device is in a VoWiFi call. When the call is terminated, VQM turns the AEC off. Note that the AEC is turned on for speakerphone and handset modes and does not get turned on for wired headset and Bluetooth headset modes. The AEC is not required for wired headset because the audio volume is quite low (because of the proximity of the earpiece to the ear), and therefore it is very unlikely for the audio from the earpiece to go in to the mouthpiece. Bluetooth headsets typically have an Echo Canceller built in. Turning the AEC on only while on a call saves battery power, compared to leaving the AEC turned on permanently.

The AEC is not turned on for Cellular calls because the WWAN phone application has a built-in echo canceller.

**Disabling VQM**

To disable VQM perform a warm boot.
Appendix C  Keypads

Introduction

The MC9500-K offers four types modular keypad configurations:

- Alpha Primary
- Alpha Numeric
- Calculator Numeric
- Telephony Numeric.
Alpha Primary Keypad

The Alpha Primary keypad produces the 26-character alphabet (A-Z, both lowercase and uppercase), numbers (0-9), and assorted characters. The keypad is color-coded to indicate which modifier key to press to produce a particular character or action. The keypad default is lowercase alpha characters. See Table C-1 for key and button descriptions and Table C-9 on page C-18 for the keypad’s special functions.

Alpha Numeric Keypad

The Alpha Numeric keypad produces the 26-character alphabet (A-Z, both lowercase and uppercase), numbers (0-9), and assorted characters. The keypad is color-coded to indicate which modifier key to press to produce a particular character or action. The keypad default is lowercase alpha characters and numerics. See Table C-3 for key and button descriptions and Table C-9 on page C-18 for the keypad’s special functions.

**Special Character Key**

*NOTE* Special characters are only available on the alpha-numeric keypad configurations.

To add special characters using the MC950-K áû key, type the related character first, then press the Orange twice followed by the áû key. Continue pressing the áû key until the special character displays. To modify an existing character, move the cursor to the right of the character then press the Orange key twice and then press the áû key until the special character replaces the original character. *Table C-9* lists the special characters you can generate.

A

API. An interface by means of which one software component communicates with or controls another. Usually used to refer to services provided by one software component to another, usually via software interrupts or function calls.

Aperture. The opening in an optical system defined by a lens or baffle that establishes the field of view.

Application Programming Interface. See API.

ANSI Terminal. A display terminal that follows commands in the ANSI standard terminal language. For example, it uses escape sequences to control the cursor, clear the screen and set colors. Communications programs support the ANSI terminal mode and often default to this terminal emulation for dial-up connections to online services.

ASCII. American Standard Code for Information Interchange. A 7 bit-plus-parity code representing 128 letters, numerals, punctuation marks and control characters. It is a standard data transmission code in the U.S.

Autodiscrimination. The ability of an interface controller to determine the code type of a scanned bar code. After this determination is made, the information content is decoded.

B

Bar. The dark element in a printed bar code symbol.

Bar Code. A pattern of variable-width bars and spaces which represents numeric or alphanumerics data in machine-readable form. The general format of a bar code symbol consists of a leading margin, start character, data or message character, check character (if any), stop character, and trailing margin. Within this framework, each recognizable symbology uses its own unique format. See Symbology.

Bar Code Density. The number of characters represented per unit of measurement (e.g., characters per inch).

Bar Height. The dimension of a bar measured perpendicular to the bar width.
**Bar Width.** Thickness of a bar measured from the edge closest to the symbol start character to the trailing edge of the same bar.

**BIOS.** Basic Input Output System. A collection of ROM-based code with a standard API used to interface with standard PC hardware.

**Bit.** Binary digit. One bit is the basic unit of binary information. Generally, eight consecutive bits compose one byte of data. The pattern of 0 and 1 values within the byte determines its meaning.

**Bits per Second (bps).** Bits transmitted or received.

**BOOTP.** A protocol for remote booting of diskless devices. Assigns an IP address to a machine and may specify a boot file. The client sends a bootp request as a broadcast to the bootp server port (67) and the bootp server responds using the bootp client port (68). The bootp server must have a table of all devices, associated MAC addresses and IP addresses.

**boot or boot-up.** The process a computer goes through when it starts. During boot-up, the computer can run self-diagnostic tests and configure hardware and software.

**bps.** See **Bits Per Second.**

**Byte.** On an addressable boundary, eight adjacent binary digits (0 and 1) combined in a pattern to represent a specific character or numeric value. Bits are numbered from the right, 0 through 7, with bit 0 the low-order bit. One byte in memory is used to store one ASCII character.

**C**

**CDRH.** Center for Devices and Radiological Health. A federal agency responsible for regulating laser product safety. This agency specifies various laser operation classes based on power output during operation.

**CDRH Class 1.** This is the lowest power CDRH laser classification. This class is considered intrinsically safe, even if all laser output were directed into the eye's pupil. There are no special operating procedures for this class.

**CDRH Class 2.** No additional software mechanisms are needed to conform to this limit. Laser operation in this class poses no danger for unintentional direct human exposure.

**Character.** A pattern of bars and spaces which either directly represents data or indicates a control function, such as a number, letter, punctuation mark, or communications control contained in a message.

**Character Set.** Those characters available for encoding in a particular bar code symbology.

**Check Digit.** A digit used to verify a correct symbol decode. The scanner inserts the decoded data into an arithmetic formula and checks that the resulting number matches the encoded check digit. Check digits are required for UPC but are optional for other symbologies. Using check digits decreases the chance of substitution errors when a symbol is decoded.

**Codabar.** A discrete self-checking code with a character set consisting of digits 0 to 9 and six additional characters: ("-", "$", ":", "/", ",", "+").

**Code 128.** A high density symbology which allows the controller to encode all 128 ASCII characters without adding extra symbol elements.
**Code 3 of 9 (Code 39).** A versatile and widely used alphanumeric bar code symbology with a set of 43 character types, including all uppercase letters, numerals from 0 to 9 and 7 special characters (“-”, “.”, “/”, “+”, “%”, “$” and space). The code name is derived from the fact that 3 of 9 elements representing a character are wide, while the remaining 6 are narrow.

**Code 93.** An industrial symbology compatible with Code 39 but offering a full character ASCII set and a higher coding density than Code 39.

**Code Length.** Number of data characters in a bar code between the start and stop characters, not including those characters.

**Cold Boot.** A cold boot restarts the mobile computer and erases all user stored records and entries.

**COM port.** Communication port; ports are identified by number, e.g., COM1, COM2.

**Continuous Code.** A bar code or symbol in which all spaces within the symbol are parts of characters. There are no intercharacter gaps in a continuous code. The absence of gaps allows for greater information density.

**Cradle.** A cradle is used for charging the terminal battery and for communicating with a host computer, and provides a storage place for the terminal when not in use.

---

**D**

**Data Communications Equipment (DCE).** A device (such as a modem) which is designed to attach directly to a DTE (Data Terminal Equipment) device.

**DCE.** See Data Communications Equipment.

**DCP.** See Device Configuration Package.

**Dead Zone.** An area within a scanner's field of view, in which specular reflection may prevent a successful decode.

**Decode.** To recognize a bar code symbology (e.g., UPC/EAN) and then analyze the content of the specific bar code scanned.

**Decode Algorithm.** A decoding scheme that converts pulse widths into data representation of the letters or numbers encoded within a bar code symbol.

**Decryption.** Decryption is the decoding and unscrambling of received encrypted data. Also see, Encryption and Key.

**Depth of Field.** The range between minimum and maximum distances at which a scanner can read a symbol with a certain minimum element width.

**Device Configuration Package.** The Symbol Device Configuration Package provides the Product Reference Guide (PRG), flash partitions, Terminal Configuration Manager (TCM) and the associated TCM scripts. With this package hex images that represent flash partitions can be created and downloaded to the mobile computer.

**Discrete Code.** A bar code or symbol in which the spaces between characters (intercharacter gaps) are not part of the code.
Discrete 2 of 5. A binary bar code symbology representing each character by a group of five bars, two of which are wide. The location of wide bars in the group determines which character is encoded; spaces are insignificant. Only numeric characters (0 to 9) and START/STOP characters may be encoded.

DRAM. Dynamic random access memory.

DTE. See Data Terminal Equipment.

---

E

EAN. European Article Number. This European/International version of the UPC provides its own coding format and symbology standards. Element dimensions are specified metrically. EAN is used primarily in retail.

Element. Generic term for a bar or space.

Encoded Area. Total linear dimension occupied by all characters of a code pattern, including start/stop characters and data.

ENQ (RS-232). ENQ software handshaking is also supported for the data sent to the host.

ESD. Electro-Static Discharge

---

F

File Transfer Protocol (FTP). A TCP/IP application protocol governing file transfer via network or telephone lines. See TCP/IP.

Flash Disk. An additional megabyte of non-volatile memory for storing application and configuration files.

Flash Memory. Flash memory is nonvolatile, semi-permanent storage that can be electronically erased in the circuit and reprogrammed. Series 9000 mobile computers use Flash memory to store the operating system (ROM-DOS), the terminal emulators, and the Citrix ICA Client for DOS.

FTP. See File Transfer Protocol.

---

H

Hard Reset. See Cold Boot.

Hz. Hertz; A unit of frequency equal to one cycle per second.

Host Computer. A computer that serves other terminals in a network, providing such services as computation, database access, supervisory programs and network control.
IDE. Intelligent drive electronics. Refers to the solid-state hard drive type.

IEC. International Electrotechnical Commission. This international agency regulates laser safety by specifying various laser operation classes based on power output during operation.

IEC (825) Class 1. This is the lowest power IEC laser classification. Conformity is ensured through a software restriction of 120 seconds of laser operation within any 1000 second window and an automatic laser shutdown if the scanner's oscillating mirror fails.

IEEE Address. See MAC Address.

Input/Output Ports. I/O ports are primarily dedicated to passing information into or out of the mobile computer’s memory. Series 9500 mobile computers include a USB port.

Interleaved 2 of 5. A binary bar code symbology representing character pairs in groups of five bars and five interleaved spaces. Interleaving provides for greater information density. The location of wide elements (bar/spaces) within each group determines which characters are encoded. This continuous code type uses no intercharacter spaces. Only numeric (0 to 9) and START/STOP characters may be encoded.

Intercharacter Gap. The space between two adjacent bar code characters in a discrete code.

Interleaved Bar Code. A bar code in which characters are paired together, using bars to represent the first character and the intervening spaces to represent the second.

Internet Protocol Address. See IP.

IOCTL. Input/Output Control.

I/O Ports. The connection between two devices, defined by common physical characteristics, signal characteristics, and signal meanings. Types of interfaces include RS-232 and PCMCIA.

IP. Internet Protocol. The IP part of the TCP/IP communications protocol. IP implements the network layer (layer 3) of the protocol, which contains a network address and is used to route a message to a different network or subnetwork. IP accepts “packets” from the layer 4 transport protocol (TCP or UDP), adds its own header to it and delivers a “datagram” to the layer 2 data link protocol. It may also break the packet into fragments to support the maximum transmission unit (MTU) of the network.

IP Address. (Internet Protocol address) The address of a computer attached to an IP network. Every client and server station must have a unique IP address. A 32-bit address used by a computer on an IP network. Client workstations have either a permanent address or one that is dynamically assigned to them each session. IP addresses are written as four sets of numbers separated by periods; for example, 204.171.64.2.

IPX/SPX. Internet Package Exchange/Sequential Packet Exchange. A communications protocol for Novell. IPX is Novell's Layer 3 protocol, similar to XNS and IP, and used in NetWare networks. SPX is Novell's version of the Xerox SPP protocol.

IS-95. Interim Standard 95. The EIA/TIA standard that governs the operation of CDMA cellular service. Versions include IS-95A and IS-95B. See CDMA.
**K**

**Key.** A key is the specific code used by the algorithm to encrypt or decrypt the data. Also see, **Encryption** and **Decrypting**.

**L**

**LASER.** Light Amplification by Stimulated Emission of Radiation. The laser is an intense light source. Light from a laser is all the same frequency, unlike the output of an incandescent bulb. Laser light is typically coherent and has a high energy density.

**Laser Diode.** A semiconductor type of laser connected to a power source to generate a laser beam. This laser type is a compact source of coherent light.

**Laser scanner.** A type of bar code reader that uses a beam of laser light.

**LCD.** See **Liquid Crystal Display**.

**LED Indicator.** A semiconductor diode (LED - Light Emitting Diode) used as an indicator, often in digital displays. The semiconductor uses applied voltage to produce light of a certain frequency determined by the semiconductor's particular chemical composition.

**Light Emitting Diode.** See **LED**.

**Liquid Crystal Display (LCD).** A display that uses liquid crystal sealed between two glass plates. The crystals are excited by precise electrical charges, causing them to reflect light outside according to their bias. They use little electricity and react relatively quickly. They require external light to reflect their information to the user.

**M**

**MC.** Mobile Computer.

**MDN.** Mobile Directory Number. The directory listing telephone number that is dialed (generally using POTS) to reach a mobile unit. The MDN is usually associated with a MIN in a cellular telephone -- in the US and Canada, the MDN and MIN are the same value for voice cellular users. International roaming considerations often result in the MDN being different from the MIN.

**MIL.** 1 mil = 1 thousandth of an inch.

**MIN.** Mobile Identification Number. The unique account number associated with a cellular device. It is broadcast by the cellular device when accessing the cellular system.

**Misread (Misdecode).** A condition which occurs when the data output of a reader or interface controller does not agree with the data encoded within a bar code symbol.

**Mobile Computer.** In this text, *mobile computer* refers to the Symbol Series 9000 wireless portable computer. It can be set up to run as a stand-alone device, or it can be set up to communicate with a network, using wireless radio technology.
N

Nominal. The exact (or ideal) intended value for a specified parameter. Tolerances are specified as positive and negative deviations from this value.

Nominal Size. Standard size for a bar code symbol. Most UPC/EAN codes are used over a range of magnifications (e.g., from 0.80 to 2.00 of nominal).

NVM. Non-Volatile Memory.

O

ODI. See Open Data-Link Interface.

Open Data-Link Interface (ODI). Novell’s driver specification for an interface between network hardware and higher-level protocols. It supports multiple protocols on a single NIC (Network Interface Controller). It is capable of understanding and translating any network information or request sent by any other ODI-compatible protocol into something a NetWare client can understand and process.

Open System Authentication. Open System authentication is a null authentication algorithm.

P

PAN. Personal area network. Using Bluetooth wireless technology, PANs enable devices to communicate wirelessly. Generally, a wireless PAN consists of a dynamic group of less than 255 devices that communicate within about a 33-foot range. Only devices within this limited area typically participate in the network.

Parameter. A variable that can have different values assigned to it.

PC Card. A plug-in expansion card for laptop computers and other devices, also called a PCMCIA card. PC Cards are 85.6mm long x 54 mm wide, and have a 68 pin connector. There are several different kinds:

Type I; 3.3 mm high; use - RAM or Flash RAM

Type II; 5 mm high; use - modems, LAN adaptors

Type III; 10.5 high; use - Hard Disks

Percent Decode. The average probability that a single scan of a bar code would result in a successful decode. In a well-designed bar code scanning system, that probability should approach near 100%.

PING. (Packet Internet Groper) An Internet utility used to determine whether a particular IP address is online. It is used to test and debug a network by sending out a packet and waiting for a response.
Print Contrast Signal (PCS). Measurement of the contrast (brightness difference) between the bars and spaces of a symbol. A minimum PCS value is needed for a bar code symbol to be scannable. PCS = (RL - RD) / RL, where RL is the reflectance factor of the background and RD the reflectance factor of the dark bars.

Programming Mode. The state in which a scanner is configured for parameter values. See Scanning Mode.

Q

Quiet Zone. A clear space, containing no dark marks, which precedes the start character of a bar code symbol and follows the stop character.

QWERTY. A standard keyboard commonly used on North American and some European PC keyboards. “QWERTY” refers to the arrangement of keys on the left side of the third row of keys.

R

RAM. Random Access Memory. Data in RAM can be accessed in random order, and quickly written and read.

Reflectance. Amount of light returned from an illuminated surface.

Resolution. The narrowest element dimension which is distinguished by a particular reading device or printed with a particular device or method.

RF. Radio Frequency.

ROM. Read-Only Memory. Data stored in ROM cannot be changed or removed.

Router. A device that connects networks and supports the required protocols for packet filtering. Routers are typically used to extend the range of cabling and to organize the topology of a network into subnets. See Subnet.

RS-232. An Electronic Industries Association (EIA) standard that defines the connector, connector pins, and signals used to transfer data serially from one device to another.

S

Scan Area. Area intended to contain a symbol.

Scanner. An electronic device used to scan bar code symbols and produce a digitized pattern that corresponds to the bars and spaces of the symbol. Its three main components are: 1) Light source (laser or photoelectric cell) - illuminates a bar code.; 2) Photodetector - registers the difference in reflected light (more light reflected from spaces); 3) Signal conditioning circuit - transforms optical detector output into a digitized bar pattern.

Scanning Mode. The scanner is energized, programmed and ready to read a bar code.

Scanning Sequence. A method of programming or configuring parameters for a bar code reading system by scanning bar code menus.
SDK. Software Development Kit

Self-Checking Code. A symbology that uses a checking algorithm to detect encoding errors within the characters of a bar code symbol.

Shared Key. Shared Key authentication is an algorithm where both the AP and the MU share an authentication key.

SHIP. Symbol Host Interface Program.

SID. System Identification code. An identifier issued by the FCC for each market. It is also broadcast by the cellular carriers to allow cellular devices to distinguish between the home and roaming service.

SMDK. Symbol Mobility Developer’s Kit.

Soft Reset. See Warm Boot.

Space. The lighter element of a bar code formed by the background between bars.

Specular Reflection. The mirror-like direct reflection of light from a surface, which can cause difficulty decoding a bar code.

Start/Stop Character. A pattern of bars and spaces that provides the scanner with start and stop reading instructions and scanning direction. The start and stop characters are normally to the left and right margins of a horizontal code.

STEP. Symbol Terminal Enabler Program.

Subnet. A subset of nodes on a network that are serviced by the same router. See Router.

Subnet Mask. A 32-bit number used to separate the network and host sections of an IP address. A custom subnet mask subdivides an IP network into smaller subsections. The mask is a binary pattern that is matched up with the IP address to turn part of the host ID address field into a field for subnets. Default is often 255.255.255.0.

Substrate. A foundation material on which a substance or image is placed.

SVTP. Symbol Virtual Terminal Program.

Symbol. A scannable unit that encodes data within the conventions of a certain symbology, usually including start/stop characters, quiet zones, data characters and check characters.

Symbol Aspect Ratio. The ratio of symbol height to symbol width.

Symbol Height. The distance between the outside edges of the quiet zones of the first row and the last row.

Symbol Length. Length of symbol measured from the beginning of the quiet zone (margin) adjacent to the start character to the end of the quiet zone (margin) adjacent to a stop character.

Symbology. The structural rules and conventions for representing data within a particular bar code type (e.g. UPC/EAN, Code 39, PDF417, etc.).
**TCP/IP.** (Transmission Control Protocol/Internet Protocol) A communications protocol used to internetwork dissimilar systems. This standard is the protocol of the Internet and has become the global standard for communications. TCP provides transport functions, which ensures that the total amount of bytes sent is received correctly at the other end. UDP is an alternate transport that does not guarantee delivery. It is widely used for real-time voice and video transmissions where erroneous packets are not retransmitted. IP provides the routing mechanism. TCP/IP is a routable protocol, which means that all messages contain not only the address of the destination station, but the address of a destination network. This allows TCP/IP messages to be sent to multiple networks within an organization or around the world, hence its use in the worldwide Internet. Every client and server in a TCP/IP network requires an IP address, which is either permanently assigned or dynamically assigned at startup.

**Telnet.** A terminal emulation protocol commonly used on the Internet and TCP/IP-based networks. It allows a user at a terminal or computer to log onto a remote device and run a program.

**Terminal.** See Mobile Computer.

**Terminal Emulation.** A “terminal emulation” emulates a character-based mainframe session on a remote non-mainframe terminal, including all display features, commands and function keys. The VC5000 Series supports Terminal Emulations in 3270, 5250 and VT220.

**Terminate and Stay Resident (TSR).** A program under DOS that ends its foreground execution to remain resident in memory to service hardware/software interrupts, providing background operation. It remains in memory and may provide services on behalf of other DOS programs.

**TFTP.** (Trivial File Transfer Protocol) A version of the TCP/IP FTP (File Transfer Protocol) protocol that has no directory or password capability. It is the protocol used for upgrading firmware, downloading software and remote booting of diskless devices.

**Tolerance.** Allowable deviation from the nominal bar or space width.

**Transmission Control Protocol/Internet Protocol.** See TCP/IP.

**Trivial File Transfer Protocol.** See TFTP.

**TSR.** See Terminate and Stay Resident.

---

**UDP.** User Datagram Protocol. A protocol within the IP protocol suite that is used in place of TCP when a reliable delivery is not required. For example, UDP is used for real-time audio and video traffic where lost packets are simply ignored, because there is no time to retransmit. If UDP is used and a reliable delivery is required, packet sequence checking and error notification must be written into the applications.

**UPC.** Universal Product Code. A relatively complex numeric symbology. Each character consists of two bars and two spaces, each of which is any of four widths. The standard symbology for retail food packages in the United States.
**V**

**Visible Laser Diode (VLD).** A solid state device which produces visible laser light.

---

**W**

**Warm Boot.** A warm boot restarts the mobile computer by closing all running programs. All data that is not saved to flash memory is lost.
